K&N® Cabin Air Filters replace your vehicle's stock cabin filter with a reusable design that cleans and freshens incoming air. They are electrostatically charged to grab and hold dust particles. K&N® cabin air filters help control odors while they help capture most mold, mildew, fungus, spores, bacteria and germs. When they get dirty they can be cleaned and reused and best of all, they come with a 10 year/100,000 mile limited warranty.

When applicable, refer to owner's manual for manufactures installation/removal instructions. The following are helpful steps when replacing/servicing cabin air filter with K&N® cabin air filter.

1. Open glove box.
2. Apply pressure to the sides of the glove box pushing into the center. This will allow the glove box to hang free from the stops. Fig 1.
3. Remove fastener(s) that holds prop cable and allow the glove box to hang down. Depending on the model year of your vehicle, this could be located inside the glove box, either the left or right hand side. Push clip down towards hole in glove box. This will allow the clip with cable to be removed from the outside of glove box. Just allow the cable to hang free. Fig 2 & 3
4. Locate cabin air filter housing behind the glove box, and unfasten clips holding cover onto cabin filter housing. Fig. 4
5. Remove dirty cabin filter from housing. Remove any debris that might be present in the cabin filter housing. Fig. 5
6. Install K&N® Cabin Filter. Note: Filter can only be installed one way. Fig. 6
7. Reverse steps 1-6 to complete cabin filter installation. With the cabin filter installed, clean an area on the cowl and apply the K&N® Stop Decal. The decal will help notify others that this is a re-usable cabin filter.
