

Fuel Injector Technical Data

PN: 42M-XX-1800-X

Battery Offset Table (3 bar)			
Voltage	Driver Type A	Driver Type B	
6	1.913	2.221	
8	1.279	1.203	
10	1.079	0.814	
11	0.946	0.638	
12	0.840	0.485	
13	0.765	0.357	
14	0.698	0.525	
15	0.642	0.452	
16	0.592	0.421	

	Driver Type A	Driver Type B		
Coil Resistance	2.0 (2.0 ohms		
Fuel Compatibility	Gasoline and Etha	Gasoline and Ethanol Blended Fuels		
Test Pressure	3 bar (43.5psi)			
Test Voltage	14.0 VDC			
Test Fluid	n-he	n-heptane		
Static Flow Rate	1235 gm/min			
Slope	20.58 mg/ms			
Minimum Static Voltage	1.65 volts			
Minimum Linear PW	2.29 ms	2.25 ms		
Opening Time	1.31 ms	1.27 ms		
Closing Time	0.89 ms	1.14 ms		

Driver Type	Description	USE
Туре А	2 amp Peak, 0.5 amp Hold, 43V Zener Voltage Suppression, 14.0 VDC	Motec, Autronic A2
Туре В	4 amp Peak, 1 amp Hold, 4 ms timer, 33V Zener Voltage Suppression, 14.0 VDC	AEM, Haltech, Motec, Autronic A4

IMPORTANT NOTE: Offset data above is for use with TRUE peak and hold injector drivers. Most OE's ECU's that drive OE low impedance injectors do not use true peak and hold injector drivers. Instead, they install resistors in-line with the injectors and drive the injectors with saturated (high impedance) injector drivers.

The shift in the curve (driver type B) between 14 and 15 volts is the result of using a 2.0 ohm injector with a 4 amp/1 amp peak and hold drive circuit and 4 ms forced hold timer. There is approximately 1.3 ohm extra circuit and coil self heating resistance at 4 amps causing the injector drive circuit to go into hold mode above 14 volts. A 2 amp peak and hold drive circuit (ie type A driver) will always go into hold mode.
