

Installation Manual

Description:
2007-2015 Jeep Wrangler JK

Completely read all the instructions before installation
Improper installation will void warranty!

Tools Needed:
Phillips Screwdriver

Start by removing the 2 phillips screws located closest to the tailgate, once these are removed the taillight can be removed from the vehicle.

After removing the stock taillight from the vehicle, unplug the stock harness from the taillight. Plug in the new taillight and mount the resistor to the vehicle by removing the plastic sheet from the 3m tape.

Mount your new LED taillight to the vehicle with the screws that were removed in the first step. Once you have installed both sides be sure to test all functions before operating on any highway.
