

THE ORIGINAL CAR COVER COMPANY

the DURO™
SEMI-CUSTOM® COVER

WATER REPELLENT
LIMITED 5 YEAR WARRANTY
Enjoy your car cover!

Your cover is made from water repellent material. This is a three-layer material, which consists of an inside and outside layer of spun-bonded polypropylene with a layer of water resistant film in the center.

This cover has been designed to provide superior resistance to the rain. As well as protection from the sun, dirt, dust, tree sap, bird droppings, and other pollutants.

Your cover is water repellent (water repellent does not mean water proof), yet breathable. Although the material your cover is made of is water repellent, it is not 100% waterproof. It is possible that water could penetrate the seams of the cover if it is pulled to tightly over the vehicle. This is why it is so important to have the correct size cover on your vehicle. Please avoid pulling or stretching the cover. Your cover is unique because it is so water repellent and yet completely breathable. All covers can cause condensation to appear under the cover when the air is warmer under the cover than outside the cover. The advantage of your covers is that the it allows trapped moisture to "breathe" back through the material and evaporate. Trapped moisture can damage vehicle paint. Never cover a vehicle that already has a wet surface. **Never cover a car with the convertible top down or T tops out or windows open.**

INSTALLATION OF YOUR CAR COVER

To identify the front and rear of your cover please note: One end of your cover has been marked "FRONT" for proper fit. You can clearly identify the rear of the cover by locating the attached loop that is sewn to the back center of the cover.

Elastic, sewn at the bottom of the cover, will hold your cover in place under normal conditions.

To install the cover, find the loop sewn to the back of the cover. Place the loop around the license plate, or any other object protruding from the rear of your vehicle, or open your trunk and place the loop inside the trunk, which you should then close to secure. Simply cover your vehicle from back to front, securing firmly and evenly over the front and rear bumpers.

An antenna patch has been included with the cover for antennas that don't retract. Simply cover your vehicle and mark where the antenna hits the cover. Then apply the adhesive-backed antenna patch to that spot. and punch a hole in the center of the patch after the patch is applied.

When removing your car cover: release both ends and fold toward the middle of the car, using a fold approximately twelve inches wide. Fold the cover three times at the center of the car. Use of this procedure will allow you to cover your car in just a few moments time.

Care Instructions

To clean your car cover, we suggest diluting a mild liquid detergent in cold or warm water, then lightly cleanse with sponge while on your vehicle.

OR

Wash in front load/triple commercial washer, in cold water with ¼ cup of mild liquid laundry detergent. **RINSE THOROUGHLY AND DO NOT PUT IN DRYER!!** Line or air dry your car cover.

WARNINGS! PLEASE READ PRIOR TO USE OF THIS COVER!

- **NOT LIABLE FOR REPAINTED SURFACES OR LACQUER PAINT.** Repainted vehicles should not be covered for a minimum of 6 months. It is best to check with your painter or body shop for recommended "cure" time. Use of any cover on a repainted vehicle may cause damage that is **not due to the cover**, but due to the new paint.
- **For maximum performance do not cover a wet vehicle.**
- **Caution: Be sure NEVER cover a hot tail pipe.**
- **NEVER cover: a car with convertible top down, windows or sunroof open or t-tops out, or while trailering a vehicle.**

Weather Conditions:

High Winds: If you are located in a high wind area be sure to tie down your cover using the grommets provided. Do not rely solely on the elasticized bottom of your cover to provide maximum protection from strong wind.

Freezing Weather: In unusual circumstances, depending on where you are located, you may experience icy conditions. When this occurs, a layer of ice may form between your vehicle and this cover. **This layer of ice must be thawed before removing your cover.** You may expedite the thawing process by pouring warm water over the cover and gently lifting the cover as the ice begins to melt. If any resistance occurs, repeat process.
