

Use this harness to connect your ACCEL 300+ with a GM remote coil (Small Distributor Cap)

Take the stock coil connector out of the coil and plug it into this connector.

Black wire goes to a good negative ground.

Connect both 4-pin connectors to your ACCEL 300+

Replaces the stock connector in the coil.

Entirely remove the stock wires and connector running from the ignition module, in the distributor, to the coil and plug this connector into the distributor cap
