## Welcome

Thank you for purchasing a BD Engine Exhaust Brake. Your kit should have the above-mentioned items for your installation; please check to make sure that you have everything. This manual is to aid you with your installation and operation of your braking unit. We strongly suggest that you fill out the information below and retain this manual for any future reference.

## Application List

Part Number	Application	Year Range	Exhaust Size
<b>1034133</b>	Dodge Cummins	1989-1993	3.0"
<b>1037135</b>	Dodge Cummins	1994-2002	3.5"
<b>1033115</b>	Chevy/GMC 6.5L	1994-2000	3.0"
<b>1037115</b>	Chevy/GMC 6.5L	1994-2000	4.0"

## Valve Assembly Installation

In the engine compartment, locate the factory Vacuum Pump and if none is present (i.e. some 1988-93 Chevrolets), then the purchase of a BD Vacuum Pump kit (Part #1030120) is needed to supply the vehicle's retarding needs.

Inspect the vehicles exhaust system between the engine and the muffler. A straight section of pipe will have to be cut to accommodate the butterfly style valve of the Exhaust Valve Assembly, being approximately 7 to 8 inches. On 1994 or newer Dodges, the valve is mounted before the Catalytic Converter, on Ford and Chev/GM vehicles with Catalytic Converters, the valve is mounted between the Cat and muffler.

There should be no exhaust-flex pipe between the engine and exhaust brake valve, however, flex pipe is okay after the valve. Cut the exhaust pipe in a straight section of the system, you will need to weld one of the supplied adapters to the section of pipe coming from the front of the vehicle's engine.

Temporarily mount the exhaust valve assembly on the adapter, with the supplied V clamp on the valve sliding. From here, cut off as much of the remaining exhaust needed to accommodate the valve and remaining adapter. Remove the exhaust valve assembly and clamp, or weld the rear adapter to the other section of exhaust pipe.

Mount the exhaust valve assembly using the two supplied V-clamps, with the vacuum cylinder pointing away from the engine, and tighten the nuts and bolts.

**NOTE: The arrow on the Exhaust Valve casting indicates exhaust flow, which should be pointed towards the rear of the vehicle (Figure 1).**

BD ENGINE BRAKE, INC.

Plant Address: A10-33733 King Rd, Abbotsford, BC, Canada V2S 7M9

US Shipping Address: 88-446 Harrison St, Sumas, WA 98295 US Mailing Address: PO Box 231, Sumas, WA 98295

Phone: 604-853-6096 Fax: 604-853-8749 Internet: [www.bd-power.com](http://www.bd-power.com)

### Control Valve Assembly

The control valve assembly has two hoses attached to it. Push the shorter piece onto the barbed fitting on the front cap of the vacuum cylinder on the exhaust valve assembly (see *Diagram 1*) and push the longer piece onto the barb fitting on the back cap (Red).

With the hoses now attached, locate or drill a new hole on the inner frame rail to mount the control valve assembly within reach of the hoses.

**Dia. 2 Control Valve Mounting**

Existing holes or new holes will have to be drilled out to 5/16". Mount the control valve assembly to the frame using the long bolt, spacer and nut provided (Dia. 2). A good ground must be made when bolting bracket to frame rail.

Advise the driver not to operate the exhaust brake if the vehicle is driven through large amounts of water, as the water can be sucked through the venting filter, which would reach the control valve assembly.

On the free 3/8" barbed fitting on the Control Valve Assembly, push one end of the long piece of hose supplied in the kit. Connect the long piece of 1/4" plastic tubing (supplied in kit) to the free compression fitting next to the 3/8" barbed fitting you just pushed the hose onto. At the other end of the plastic tubing, screw in the supplied brass filter fitting so that it is snug and secure. Uncoil the long wire attached to the control valve, insert the wire into the loom and push it up to the control valve. Run the wire, tubing and hose along the frame rail and up into the engine compartment, securing with tie wraps and keeping them clear of moving or heated parts.

**NOTE:** The end of the plastic tubing w/brass filter will not be connected to anything.

**NOTE:** If the vehicle has a vacuum assisted hydraulic brake booster or the vacuum pump is located on the driver side, then run the hose and wire along a cross member and up the driver's side frame rail.

In the engine compartment, locate the hose coming from the vacuum pump on the engine or to the vacuum assisted hydraulic Brake Booster. (On newer Chevrolets, the Air Conditioner Pump will have to be unbolted from its bracket and pushed off to one side.) Push the plastic tee (supplied in Application Kit) onto the hose coming from the Control Valve Assembly, and run hose to Vacuum Pump or Brake Booster.

Cut the outlet hose of the vacuum pump or brake booster, no closer than 1" from the outlet fitting. Push both ends of the hose onto the plastic tee. Secure the hose with tie wraps and keep it clear of moving or heated parts.

## *Throttle Switch Installation*

### **Ford Pick-up 1983-94 (Non-PowerStroke)**

Mount the throttle switch on the bracket, with the silver button of the switch facing the rod of the Accelerator Pedal, so that the rod will hit the silver button when it is in its resting/idle position. Loosen the two lower nuts holding the Accelerator Pedal Assembly to the floorboard, slide the bracket all the way left under the nuts, using the two large grooves, and tighten (Dia. 3).

BD ENGINE BRAKE, INC.

Plant Address: A10-33733 King Rd, Abbotsford, BC, Canada V2S 7M9

US Shipping Address: 88-446 Harrison St, Sumas, WA 98295 US Mailing Address: PO Box 231, Sumas, WA 98295

Phone: 604-853-6096 Fax: 604-853-8749 Internet: [www.bd-power.com](http://www.bd-power.com)

## **Ford PowerStrokes (1994-2000)** ***DFIV Wiring Diagram***

**CAUTION:** Before installing any wiring modifications or equipment, ensure to disconnect the battery ground (negative) terminals on all the vehicle batteries as damage to the vehicles ECU and/or installed components may result.

**NOTE:** If the vehicle does not have Cruise Control, remove the green and blue wire from the install and discard.

Remove the lower section of the drivers side dash, under the steering column, and mount the DFIV module to the cross member. Connect the black wire from the DFIV module to a good ground.

Locate one of the ignition switched red/black tracer wires under the steering column (one is 10/12ga and the other is 14/16ga) and connect an appropriate Posi-Tap connector to it (green for 10/12ga and black for the 14/16ga wire). Connect the fused red wire from the toggle switch to this Posi-Tap and mount the switch in a convenient spot on the dash.

Locate the Throttle Position Sensor (TPS) at the throttle pedal. Use a Posi-Tap connector to attach the yellow wire from the DFIV module to the grey w/white tracer wire (1999-2003 trucks) or the red wire w/gray tracer wire (1994-1997 trucks) to the TPS.

Ensure the green wire is connected to the '**COM**' terminal of the DFIV module, the blue wire is connected to the '**FORD**' terminal of the DFIV module, and the pink wire is connected to the '**BRAKE**' terminal of the DFIV module. Also check to ensure all other wires at the DFIV module are secure.

Run the other end of these wires through a grommet on the firewall making sure all wires are secure and away from moving objects and heat sources. Go to page 11 and follow the instructions to calibrate the DFIV module.

### **Chevrolet/GMC (1994-2000) 6.5L Trucks**

Below the throttle pedal you will need to remove the two nuts below the potentiometer, holding the Accelerator Pedal Assembly to the floor board, and mount the throttle switch bracket to the Accelerator Pedal Assembly with the two screws so that the bracket angles off to the right.

Mount the throttle switch on the bracket, with the silver button of the switch facing the rod of the Accelerator Pedal, so that the rod will hit the silver button when it is in its resting/idle position. (Similar to Dia. 3)

### **Chevrolet/GMC (1982-93) 6.2/6.5L and Generic Applications**

The throttle switch assembly consists of an "L" shaped bracket and a switch with a long flexible arm; the switch is activated when the flexible arm is moved. Mount the bracket and switch around the accelerator pedal, so that when the accelerator comes back to it's resting/idle position, the pedal arm presses against the flexible arm of the switch.

### **Dodge**

#### **1988-1993**

The Throttle Switch Bracket mounts behind the throttle linkage using the two bolts used for mounting the throttle linkage to the engine (*Diagram 6*). On all years, if throttle return spring(s) are weak, another spring may have to be installed.

#### **1994 to 1998 12V**

Place the Throttle Switch on the bracket by using the two bolts of the engine front cover by the injection pump throttle linkage (*Diagram 5*). Every time the throttle is released the linkage should actuate the micro switch by slightly touching it.

BD ENGINE BRAKE, INC.

Plant Address: A10-33733 King Rd, Abbotsford, BC, Canada V2S 7M9

US Shipping Address: 88-446 Harrison St, Sumas, WA 98295 US Mailing Address: PO Box 231, Sumas, WA 98295

Phone: 604-853-6096 Fax: 604-853-8749 Internet: www.bd-power.com

## 1998 to 2002 24V

These models of Cummins trucks have been upgraded to use the **DFIV** (Dodge/Ford Idle Verifier) system. This system electronically senses the throttle position via the **APPS** (Accelerator Pedal Position Sensor) output circuit.

To obtain access to the Cruise Control wiring harness, remove the lower steering column panel by removing the mounting screws and unsnapping the panel from the instrument panel.

Under the dash running vertical by the left of the steering column, locate the smaller wiring harness that runs out of the main harness.

Remove some of the black electrical tape to gain access to the smaller wire bundle.

### **\*\*\*DANGER\*\*\***

**THERE IS A BLACK WIRE WITH A TWISTED LIGHT BLUE/GREEN TRACER DO NOT CONNECT OR TEST THIS WIRE AS IT IS CONNECTED TO THE AIR BAG AND THE BAG MAY DEPLOY CAUSING DAMAGE AND/OR INJURY!**

### **\*\*\*DANGER\*\*\***

Remove some of the black electrical tape from the small bundle to gain access to the small Black wire with Light Blue tracer and install a gray Posi-Tap™ to it. Insert the Blue wire from the DFIV module into this connector.

In this same wiring harness, locate the Red wire with Light Green tracer and install another gray Posi-Tap™. Insert the Green wire from the DFIV module into this connector.

Go to page 11 for the DFIV calibration instructions.

BD ENGINE BRAKE, INC.

Plant Address: A10-33733 King Rd, Abbotsford, BC, Canada V2S 7M9

US Shipping Address: 88-446 Harrison St, Sumas, WA 98295 US Mailing Address: PO Box 231, Sumas, WA 98295

Phone: 604-853-6096 Fax: 604-853-8749 Internet: [www.bd-power.com](http://www.bd-power.com)

Dodge DFIV Wiring Diagram (1998½ - 2002)

**On all throttle switch applications (except PowerStrokes):**

Manually move the linkage back and forth to make sure the proper activation to the throttle switch is occurring. The throttle switch may have to be adjusted on occasion.

**NOTE:** With mechanical injection pump systems, the linkage is moved during cruise control and/or fast idle operations, so the brake will not be activated during these occurrences.

Run the wire coming from the Control Valve Assembly through the fire wall (except Dodge and Cummins Trucks & Motorhomes) and to the Throttle Switch; using an electrical connector, hook up wire to the top screw on switch, or on Ford PowerStrokes, free terminal (#87a) on relay.

For Dodge and Cummins Trucks & Motorhomes, run wire over to Throttle Switch, cut wire and connect to the top terminal with an electrical connector.

## DFIV Calibration

-- For 1999-2002 Ford Powerstrokes and 1998-2002 Dodge Cummins model trucks.

Ensure the connections of the corresponding wires to the DFIV Control Module are correct as shown in the wiring diagram.

To achieve the correct setting for the activation of the exhaust brake in relation to the throttle pedal the DFIV Module must be calibrated for your vehicle.

Connect one end of a test light to the "BRAKE" terminal of the DFIV module and the other end to a good ground. With the throttle at idle, start the engine and turn on brake switch. Then, using a small flat bladed screwdriver, turn the small adjusting screw in the DFIV Module counterclockwise or clockwise until the test light JUST turns on.

**CAUTION:** THE ADJUSTING SCREW IS A MICRO-SWITCH THAT IS VERY DELICATE, SO TURN USING SMALL ADJUSTMENTS.

Test by revving up the engine to approximately 1200 RPM and releasing the throttle. As the accelerator pedal is applied the test light should turn off just before the engine starts to rev, indicating proper calibration of the DFIV Module with the APPS.

Then the test light should activate again when the throttle pedal returned to idle. If not, readjust the DFIV Module so that it does. Reinstall lower dash cover.

## Power and Toggle Switch

Mount the toggle switch in a convenient and secure location on the dash. Locate a 12v ignition switched source (fuse panel or wire), then connect the in-line fuse holder to the source line or use the fuse tapper (Diagram 7).

This power line should be connected to the middle terminal of the toggle switch. Ground the black wire from the upper switch terminal marked amber. Connect the lower switch output terminal to the middle position on the micro switch mounted to throttle. Connect the reaming

terminal on the micro switch to the exhaust brake control valve you mounted earlier. Route this wire away from any heat sources or moving parts.

For Powerstroke applications the toggle switch and the manual shifter switch should control power to the DFIV. When the brake is engaged 12V should be provide to the switched input of the DFIV. See previous drawing.

**Cruise Control Disable**

**Chevrolet/GMC Cruise Control Disable**

For 1994-up Chevrolets you will need to utilize the relay that is provided in the kit to connect the cruise control disable system. On 1994-up Chevrolets, right below the steering column, under the dash, there is a wire connector assembly with a large amount of wires connected to it.

One of the purple wires leads up to another 8-pin connector just above it. You can verify the wire by tapping the wire with a test light and grounding the clip; with the ignition turned on the light should be illuminated, but no light when you press on the brake pedal. Cut this wire and connect both ends (see Diagram 9) to the purple (or blue) wires coming from the supplied relay using non-insulated butt connectors and shrink wrap.

The yellow wire from the relay connects to the same terminal on the Throttle Switch as the wire coming from the toggle/shifter switch. Mount the relay under the dash and ground the Black wire.

**Ford Powerstroke**

Locate the black w/yellow tracer wire at the cruise control disable (Brake Applied) switch located on the brake master cylinder and expose the wiring approximately 4-6 inches from the switch to allow for a good length to work with. This wire may be a different color in various applications. If there is no black w/yellow wire going to this switch, then use a test light to check which wire changes state (power to no power) when the brake pedal is applied.

Cut the black w/yellow tracer wire (BK/Y), then strip both ends and attach a separate blue Posi-Lock connector on each end of the cut wire. Run the green and blue wires that were brought through the firewall to the Brake Applied Switch at the

brake booster and cut off any excess. Attach these wires to the two blue Posi-Lock connectors that you have just installed to the Black wire w/Yellow tracer.

### **Dodge Cruise Disable**

You will only need to disable cruise control on 2001+ 245HO standard transmission trucks. Please order part #1321039 (DFIV Application Kit).

BD ENGINE BRAKE, INC.

# Exhaust Brake Routing Diagram

BD ENGINE BRAKE, INC.

Plant Address: A10-33733 King Rd, Abbotsford, BC, Canada V2S 7M9

US Shipping Address: 88-446 Harrison St, Sumas, WA 98295 US Mailing Address: PO Box 231, Sumas, WA 98295

Phone: 604-853-6096 Fax: 604-853-8749 Internet: [www.bd-power.com](http://www.bd-power.com)

## Optional Manual Shifter (Push-Pull Style)

Mount the push/pull switch on the shifter lever (Diagram 10), using the switch clamp, and secure the cable on to the lever.

**NOTE:** Keep cable away from spots where it could get pinched during shifting. Strip the ends of the wires and attach male blade connectors to each.

Slip off the Red wire from Toggle Switch and attach to Black wire of Manual Shifter Switch cable, and, slip off the Yellow wire from Toggle Switch and attach to White wire of cable. Discard Toggle Switch and its black wire. Attach the Yellow wire to the middle terminal of Throttle pedal Switch or the 12V Switched input of the DFIV.

**Dia. 10 Shifter Switch**

## Optional Brake Pressure Gauge

For the optional Brake Pressure Gauge, push tubing through firewall. The kit comes with a bracket to mount the gauge under the dash, but it could be mounted in any optional 2" gauge mount.

Connect the black plastic tubing to the back of the gauge using a 1/8npt female compression fitting. Using electrical connectors, connect the wire coming from the light bulb holder to a power source, preferable to one that is switch by the head light switch, and connect a ground wire to the mount screws of the gauge. Mount the gauge in the desired location.

## Testing

Start up the engine and turn the toggle switch on to make sure the brake activates. Depress the throttle pedal and let up on it to check that operation of the throttle switch, allowing the brake to engage when the throttle is in the resting/idle position.

Using a standard pressure gauge, follow the list below for proper setting, with the engine running at idle and brake turned on.

Vehicle	Lbs.	Pressure @ Idle
Chevy 6.2/6.5L & Ford 6.9/7.3L	32lbs.	<b>8-10 lbs.</b>
Ford Powerstroke & Dodge Cummins	40lbs.	<b>10-12 lbs.</b>
Dodge Cummins w/ 60lb. exhaust springs	60lbs.	<b>18-20 lbs.</b>

**If the brake pressure does not fall within these limits, please call the BD Engine Brake technical hotline at (800) 887-5030.**

Be sure to test the cruise control disconnect system while test-driving the 1994 and newer Ford PowerStrokes and Chevrolet 6.5L engines. Set the cruise at a safe speed and then turn the exhaust brake on, which should turn the Cruise Control off right away.

If the cruise control does not disengage right away, then turn the exhaust brake off immediately.

If the cruise control did disengage, then turn the exhaust brake off and hit the resume function on the cruise control switch to see if the cruise will re-engage.

*Maintenance & Trouble Shooting*

To prevent premature service or seizing of the valve, we suggest continual use of the brake and to restrain from extended periods of non-usage. If problems do occur with operation of the unit, then consult the following list and the diagrams on the previous pages for the most common problems.

Complaint	Cause	Check/Correction
<b>Braking Performance not effective</b>	Valve set too low or drive train problem	Check effect in lower gear. Check auto trans stall speed. Adjust valve to close more to increase pressure at idle.
<b>Brake quit operating</b>	Electrical or Vacuum problem	Check fused at in-line fuse holder. Check throttle switch for activation. Check power at connections between line tap and Control Valve. Check vacuum pump and hose.
<b>Gauge not reading, but brake working</b>	Plugged pressure line	Disconnect pressure line from gauge and blow air through pressure line.

If problems still occur, then please call our BD Technical Department Monday to Friday, 8:00am to 5:00pm Pacific Standard Time (PST) at (800) 887-5030, or we can be reached by fax at (604) 853-8749.

## *Operating Guidelines*

Thank you for taking interest in the BD Engine Exhaust Brake. As a driver, you probably already know the need for extra braking power that your vehicle requires on the hills and long grades. With loads being towed behind you, the extra push when slowing down or maintaining speed on downward grades can prove to be a great strain on your vehicles chassis's braking system, even to the point of "burn-up". These guidelines were designed to offer you a better understanding of the benefits of exhaust brakes and are partly based upon material developed by the U.S. Department of Transportation National Highway Traffic Safety Administration.

The emphasis on today's vehicles is to give the consumer a product that can give them usable power with fuel efficiency. But, in the transition, the vehicles have lost their natural braking power, making it more easy for the vehicle to continue to roll and harder to stop. Of course, this gets more noticeable with the increase of weight, on or behind the vehicle. This is where an exhaust brake becomes a useful tool for increasing the driveline drag of the vehicle without the use of the chassis's brakes. A tool, which with maximum or even occasional use can reduce wear on chassis' braking parts and at the same time increase safety.

The BD Exhaust Brake can be used to help maintain a controlled vehicle speed on a downward grade, as well as slowing the vehicle down for such times as turns or exit ramps, without you using your chassis's brakes. But, the exhaust brake cannot be used as a parking brake or will not bring your vehicle to a complete stop.

By using a BD Exhaust Brake, the life and effectiveness of your chassis's brakes will increase. This is because of the decreased use of the chassis's brakes in situations like hills, the wear factor is reduced and there is less opportunity for your chassis's brakes to heat up which would reduce the efficiency.

When you ride your chassis's brakes, make hard stops or have poorly adjusted brakes, this creates high temperatures and as your brakes get hotter, the more chance there is for fade or failure.

With terrain that is a series of up and down grades, the BD Exhaust Brake will aid in reducing exhaust valve warpage. Because of the power needed to pull your vehicle and load up a hill, this generates a lot of heat. When you have reached the crest of the hill and are now coasting down the other side, the heated valves are too quickly cooled. With the exhaust brake engaged, the heat loss to the valves will be reduced, which can prevent valve warpage.

When the toggle switch is turned to the "On" position, the valve is activated every time the driver takes his foot off of the throttle pedal. When the driver puts pressure back on the throttle pedal, the throttle switch is deactivated and the valve opens again.

BD ENGINE BRAKE, INC.

Plant Address: A10-33733 King Rd, Abbotsford, BC, Canada V2S 7M9

US Shipping Address: 88-446 Harrison St, Sumas, WA 98295 US Mailing Address: PO Box 231, Sumas, WA 98295

Phone: 604-853-6096 Fax: 604-853-8749 Internet: [www.bd-power.com](http://www.bd-power.com)

Exhaust brakes are designed to operate with the throttle at idle, not to be used in conjunction with cruise controls, and not designed to aid in gear shifting. Such cases could cause damage to engine and/or the exhaust brake.

Incorporated with the BD Exhaust Brake, there is a pressure regulating system that will control the created backpressure. If the backpressure reaches the set limit, the exhaust valve will open slightly to relieve the excess pressure.

The brake pressure at idle is required to be checked and adjusted at time of installed, two weeks after installed, and on a regular twice a year interval.

For Ford IDI and Chevy vehicles adjust the brake pressure to 8-10lb at idle; and Ford PowerStrokes, adjust to 10-12lb at idle.

On Dodge 6BTA (1989-98) with the stock exhaust valve springs, adjust the idle pressure to 10-12lb at idle, and if the heavy duty valve springs have been installed, adjust idle pressure to 18-20lb at idle. Dodge ISB (1998-up), adjust idle pressure to 18-20lb at idle.

If you have purchased a system that is rated for the stock engine exhaust valve springs, and you later decide to update to the heavy duty exhaust valve springs, you will have to adjust the brake pressure to 20-25lb at idle.

Never adjust the brake to the 60 lb. setting on an engine that has not had the heavy-duty engine exhaust valve springs installed first.

With the normal mounting position of the Control Valve Assembly being on the frame rail, it would make it exposed to water if driven through rivers, creeks, or deep bodies of water. If the Exhaust Brake is being used during these situations, water could be sucked through the venting filter and eventually into the Vacuum Cylinder, damaging both. For the best prevention of this damage, do not operate the brake during these occurrences.

The best scenario for exhaust braking is when going down hill, select a gear that lets you maintain a constant speed with little or no use of the chassis's brakes, or the same gear that would be used to go up the same grade of hill. This also depends on the weight, load or road conditions that the vehicle will come upon.

So, in summary, by using the BD Exhaust Brake, you reduce the need for use of your chassis's brakes in situations where you need to slow down or maintain (i.e. hills, off ramps, approaching speed changes or traffic lights). By reducing the use of your chassis' brakes, in these situations, the heat build up is reduced, as well as wear and damage to linings and drums. And, when you reduce these factors, you

BD ENGINE BRAKE, INC.

Plant Address: A10-33733 King Rd, Abbotsford, BC, Canada V2S 7M9

US Shipping Address: 88-446 Harrison St, Sumas, WA 98295 US Mailing Address: PO Box 231, Sumas, WA 98295

Phone: 604-853-6096 Fax: 604-853-8749 Internet: [www.bd-power.com](http://www.bd-power.com)

save your chassis's brakes for when you really need them (i.e. for stopping or emergencies).

The BD Exhaust Brake is not a substitute for your chassis's brakes and, cannot correct or compensate for poorly maintained or misadjusted brakes. But, when you need to slow down or maintain a constant speed, the BD Exhaust Brake will be a valuable and effective tool. Exhaust Brakes are more efficient at preventing than correcting an over speed condition.

To increase the life of your exhaust brake we recommend daily operation. This could simply be switching it on and off a couple times a day. This will prevent the butterfly from sticking due to carboning up.

Thank you and happy motoring,

BD Engine Brake, Inc.

## BD Engine Brake, Inc. *LIMITED WARRANTY STATEMENT*

THE INSTALLATION OF THIS PRODUCT INDICATES THAT THE BUYER HAS READ AND UNDERSTANDS THIS AGREEMENT AND ACCEPTS ITS TERMS AND CONDITIONS.

### DISCLAIMER OF LIABILITY

BD Engine Brake Inc., its successors, distributors, jobbers, and dealers (hereafter "BD") shall in no way be responsible for the product's proper use and service. THE BUYER HEREBY WAIVES ALL LIABILITY CLAIMS.

**BD** disclaims any warranty and expressly disclaims any liability for personal injury or damages. **BD** also disclaims any liability for incidental or consequential damages including, but not limited to, repair labor, rental vehicles, hotel costs, or any other inconvenience costs by reason of use or sale of any such equipment. The **BUYER** acknowledges and agrees that the disclaimer of any liability for personal injury is a material term for this agreement and the **BUYER** agrees to indemnify **BD** and to hold **BD** harmless from any claim related to the item of any equipment purchased.

This warranty shall not apply to any unit that has been improperly stored or installed, or to misapplication, improper operation conditions, accidents, neglect, or which has been improperly repaired or altered or otherwise mistreated by the **BUYER** or his agent. **BD** also assumes no liability regarding the improper installation or misapplication of its products. It is the installer's responsibility to check for proper installation and if in doubt, contact the manufacturer.

### LIMITATION OF WARRANTY

BD Engine Brake Inc. (hereafter "BD") warrants to the **BUYER** that any parts purchased shall be free from defects in material workmanship. A defect is defined as a condition within the product that would render the product inoperable. **BD** gives Limited Warranty as to description, quality, merchantability, fitness for any product's purpose, productiveness, or any other matter of **BD's** product sold herewith. **BD** shall be in no way responsible for the product's open use and service and the **BUYER** hereby waives all rights other than those expressly written herein. This Warranty shall not be extended or varied except by a written instrument signed by **BD** and the **BUYER**.

**The Warranty is Limited to two (2) years from the date of sale. Labor costs incurred by the removal and replacement of the BD product, while performing warranty work, will be covered for 1 (one) year, payable at BD rates, at authorized centers and with prior approval. Until BD has approved the claim, the consumer may be responsible for these costs.**

A Return Authorization (WA) number, obtained in advance from **BD**, must accompany all products returned for warranty consideration. All products must be returned, shipping prepaid, to **BD** and must be accompanied by a dated proof of purchase receipt. All Warranty claims are subject to approval by **BD** and repaired or replaced product will be returned to the customer freight collect. Accepted warranty units, which have been replaced, become the sole property of **BD**.

This warranty is in lieu of all other warranties or guaranties, either expressed or implied, and shall not extend to any consumer or to any person other than the original purchaser residing within the boundaries of the continental U.S. or Canada.

IN THE EVENT THAT THE BUYER DOES NOT AGREE WITH THIS AGREEMENT, THE BUYER MAY PROMPTLY RETURN THIS PRODUCT, IN A NEW AND UNUSED CONDITION, WITH A DATED PROOF OF PURCHASE, TO THE PLACE OF PURCHASE WITHIN THIRTY (30) DAYS FROM DATE OF PURCHASE FOR A FULL REFUND.
