RUBBER ISOLATOR REMOVAL DIAGRAM

This technique can be used if and Exhaust Hanger Removal Pliers is not available.

Using a 5/8" open end wrench, slide the wrench up to the rubber isolator, cradling the hanger rod as shown. Next place the flat edge of a pry bar between the wrench and the hanger stop or hanger rod. Then simply rotate the pry bar toward the wrench to remove the rubber isolator.

Note: Using a spray lubricant or soapy water on the hanger rod and the rubber isolator helps removal.

REVERSE PULL FISHWIRE TECHNIQUE

ATTACH FISHWIRE TO CARRIAGE BOLT AND SLIDE SPACER ONTO FISHWIRE. PUSH THE BOLT THRU THE HOLE FOLLOWED BY THE SPACER (AS SHOWN). PULL BOLT BACK INTO POSITION, PROTRUDING FROM THE FRAME.

WELDNUT CLEANING

To remove debris from weldnuts in frame, spray lubricant or compressed air into hole. For heavy debris, use a small wire brush. (Be careful not to damage threads).

FISHWIRE TECHNIQUE

INSERT COILED END OF FISHWIRE TOOL THROUGH HITCH MOUNTING HOLE IN VEHICLE FRAME RAIL AND OUT THE ACCESS HOLE. PASS COILED END OF FISHWIRE THROUGH SPACER AND THREAD BOLT INTO COIL. KINK WIRE TO KEEP SPACER SEPERATE FROM BOLT AS SHOWN. PULL FISHWIRE, SPACER, AND BOLT THROUGH FRAME AND OUT MOUNTING HOLE. USE FISHWIRE TO GUIDE HITCH DURING MOUNTING AND PREVENT LOSS OF BOLT / SPACER INSIDE FRAME RAIL.

NOTE: SOME VEHICLES MAY FISHWIRE THROUGH END OF FRAME

INSTALLATION STEPS

1. Lower the mufflers by removing (2) bolts in the exhaust hanger brackets. Remove upper exhaust hanger bracket from rubber isolator. Return the exhaust hanger brackets and bolts to vehicle owner. (See Rubber Isolator Removal Diagram.)
2. Support the exhaust to avoid damaging it. Remove the exhaust hangers near the exhaust split, forward of the mufflers, from the rubber isolators. (See Rubber Isolator Removal Diagram.)
3. Fishwire 1/2-13 X 1-1/2" carriage bolt and SP10 spacer through driver side access hole and out forward most hole in frame rail. (See Fishwire Technique.)
4. Reverse fishwire 1/2-13 X 1-1/2" carriage bolts and SP10 spacers into the access holes, both sides. (See Reverse Fishwire Technique.)
5. Raise the hitch into position and secure with flange nuts as shown.
6. Secure forward most hole on passenger side with M12-1.75 X 35mm hex bolt and 1/2" conical toothed washer as shown.
7. Torque all 1/2" hardware to 110 ft-lbs. Torque all M12 hardware to 79 ft-lbs.
8. Raise the exhaust into place and secure it to the hitch by attaching the rubber isolators to the hanger tab in the hitch sideplates. (Spray lubricant or soapy water will ease the intallation of the isolator onto the mount tab.)

Support the exhaust to avoid damaging it. Remove the exhaust hangers near the exhaust split, forward of the mufflers, from the rubber isolators. (See Rubber Isolator Removal Diagram.)

INSTALLATION WALKTHROUGH:

Step 3:

Using a 10mm socket and ratchet, remove the (2) bolts securing the driver side exhaust isolator bracket to the frame rail and remove the bracket from the vehicle.

Step 4:

Using a 18mm socket and ratchet, remove the (2) bolts securing the passenger side exhaust isolator bracket to the frame rail. Remove the bracket from the vehicle. Return the brackets and hardware to the vehicle owner.

Step 5:

Using the access hole in the driver side frame rail, fishwire a 1/2-13 carriage bolt and CM-SP10 spacer into the existing hole in the frame rail. (See Fishwire Technique Diagram.)

FISHWIRE TECHNIQUE

INSERT COILED END OF FISHWIRE TOOL THROUGH HITCH MOUNTING HOLE IN VEHICLE FRAME RAIL AND OUT THE ACCESS HOLE. PASS COILED END OF FISHWIRE THROUGH SPACER AND THREAD BOLT INTO COIL. TOWING SAFETY INFORMATION:

Gross Trailer Weight / GTW

The Gross Trailer Weight is the weight of the trailer & cargo. Measure this by putting the fully loaded trailer on a vehicle scale.

Tongue Weight / TW

The downward force that is exerted on the hitch ball by the coupler. The tongue weight will vary depending on where the load is positioned in relationship to the trailer axle(s). To measure the tongue weight, use either a commercial scale or a bathroom scale with the coupler at towing height. When using a bathroom scale with heavier tongue weights, use the method shown and multiply the scale reading by 3.

Weight Carrying / WC

The total weight of both the trailer and the cargo inside. Never exceed the weight capacity of your trailer hitch.

Weight Distribution / WD

Used to balance the weight of the cargo between the front and rear wheels throughout the trailer, allowing for better steering, braking, and level riding.

Sway Control

A device used to reduce the lateral movements of the trailer that are caused by the wind. This works in conjunction with a weight distribution hitch. Do not use this on a class 1 or 2 hitch, or with surge brakes.

Ball Mount

The ball mount is placed inside the opening of the receiver hitch which is mounted to the vehicle. Make sure a hitch pin and clip is properly securing the ball mount to the receiver hitch before you begin towing.

- A: Rise. B: Drop. C: Hole Size. D: Length.

Trailer Ball

The connection from the hitch to the trailer. There are many factors that determine the correct hitch ball:

- Number one is the hitch ball's gross trailer weight rating.
- The mounting platform must be at least 3/8" thick.
- The hole diameter must not be more than 1/16" larger than the threaded shank.
- Every time you tow, check the nut and lock washer to make sure they are fastened securely.
- A: Ball Dia. B: Shank Dia. C: Shank Length. D: Shank Rise.

Coupler

The component that is placed over the trailer ball to connect the vehicle to the trailer. Be sure that the coupler size matches the size of the hitch ball and that the coupler handle is securely fastened. To determine what size hitch ball you need for your application you will need to know the size of coupler that is on the trailer. Be sure your coupler is properly adjusted to the ball you are using.

NOTE: For added security the use of safety devices such as Coupler Safety Pins and Locks is strongly recommended.

Safety Chains

Safety chains are a requirement and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so you can turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper.

Trailer Classification: Safety Chain Breaking Force - Minimum

Class 1: 2,000 lbs. (8.9 kN)

Class 2: 3,500 lbs. (15.6 kN)

Class 3: 5,000 lbs. (22.2 kN)

The strength rating of each length of safety chain or its equivalent and its attachments shall be equal to or exceed in minimum breaking force the GVWR (Gross Vehicle Weight Rating) of the trailer.

Electrical

Trailer lights, Electric Brakes, Break-away systems - Every time you tow, be sure to check that all components are working properly.
