

INSTALLATION INSTRUCTIONS TORNADO ELECTRIC FAN KIT PART # 16516

Please read these instructions completely before beginning installation

KIT CONTENTS

QTY.	DESCRIPTION	QTY.	DESCRIPTION
1	Electric Fan Assembly	1	30 Amp Fuse Holder
6	Mounting Rod	3	Blue Female Connector
6	Mounting Clip	1	Blue Wire Tap Connector
2	Mounting Feet	2	#10 Blue Ring Terminal
6	1x1 Foam Pad	3	Blue Butt Connector
1	Manual Switch	4	#10 x 1/2" Sheet Metal Screws
7ft	14 Gauge Wire	4	4" Zip Ties

TOOLS NEEDED

Standard Screw Driver
Drill
5/32" Drill Bit
12V Test Light
Wire Stripper
Crimping Tool
Dyke Pliers

IMPORTANT

This fan assembly is designed for both **PUSHER** and **PULLER** applications.
To change airflow direction from the factory setting, you **MUST** follow the directions below or performance will be compromised. (See Diagram #1)

PRE-INSTALLATION

Important: Tornado Electric Fans come from the factory with a product label installed on one end of the fan shroud. Before installation check the product label to confirm airflow direction and positive electric fan lead color. Airflow direction will be shown with an arrow.

This fan is factory setup for PULLER applications

Changing airflow direction

To change the airflow direction from the factory setting:

1. Remove the Nut or Clip that holds the electric fan blade onto the motor shaft.
 2. Carefully remove the fan blade from the motor shaft.
- Note:** This is an interference fit and requires some effort.
3. Flip the fan blade upside down and reinstall onto the motor shaft. Make sure the roll pin on the motor shaft is aligned with the slot on the fan blade.
 4. Reinstall nut or clip on motor shaft.

Important: For Puller applications use the referenced wire colors stated on the Product Label. For Pusher applications the two wires **MUST** be reversed to change airflow direction.

Diagram #1

ELECTRIC FAN MOUNTING

Note: This Electric Fan Assembly requires 6 mounting positions. Four Mounting Rods will be installed in the locations molded in the shroud, the additional two Mounting Rods will be used with the 2 supplied Mounting Feet. (See Diagram #2)

1. Identify the 2 Mounting Feet supplied and install onto the Electric Fan Assembly by sliding them into the slots on the Electric Fan Assembly. See Diagram #2 for recommended locations.

2. Position the electric fan against the radiator in the desired location.

3. Take the Plastic Rods provided and install through the four mounting holes on the shroud pushing them slowly into and through the radiator core. (See Diagram #2)

Caution: Do not use excessive force when pushing Plastic Rods through radiator core. Excessive force could cause damage to the radiator fins and/or core. Plastic Rods should not be inserted thru both the radiator and the condenser cores.

4. Take the 1 x 1 Foam pads provided and install them onto the Plastic Rods now protruding through the radiator core. (See Diagram #3)
5. Take the Plastic Clips provided, making sure they are in the correct direction (Derales writing out) install onto the Plastic Rods and cinch them until the 1 x 1 Foam Pads are compressed. (See Diagram #3)
6. Cut off the excess Plastic Rod.

(Continues on Page 2)

Diagram #2

MANUAL SWITCH MOUNTING

(See Diagram #3)

1. Find a location in the vehicles passenger compartment.
2. Using the Manual Switch as a template, mark and drill two 5/32" holes.

Note: Rocker Switch can be removed from Switch Bezel by pinching the tabs on the top and bottom of the Rocker Switch.

3. Using the supplied #10 x 1/2" Sheet Metal Screws, attach the Manual Switch in the desired location.

Diagram #3

WIRING

(See Diagram #4)

Important: Before beginning reference the Product Label on the Electric Fan for the factory fan configuration and Positive fan lead color. If you wish to configure the Electric Fan opposite of the factory setting, the Positive (+) and Negative (-) Electric Fan leads MUST be switched.

1. Disconnect the Negative (-) terminal on the vehicles battery.
2. Using the #10 Ring Terminal & #10 x 1/2" Sheet Metal Screw supplied, attach the Negative (-) Electric Fan lead to a good chassis Ground (-).
3. Using the 14 Gauge Wire, Blue Female Connector & Blue Butt Connector supplied, attach the Positive (+) Electric Fan lead to the #2 terminal on the Manual Switch.
4. Using the 14 Gauge Wire, #10 Ring Terminal & #10 x 1/2" Sheet Metal Screw supplied, attach the #3 terminal on the Manual Switch to a good chassis Ground (-).
5. Using the 14 Gauge Wire, Fuse Holder, Blue Female Connector, Blue Butt Connectors & Blue Wire Tap Connector supplied, attach one end of the wire to a Positive (+) switched ignition source.
6. Attach the other end of the wire to either wire on the Fuse Holder.
7. Attach the remaining wire on the Fuse Holder to the #1 terminal on the Manual Switch.
8. Reattach the Negative (-) terminal to the vehicles battery.

Diagram #4

TROUBLESHOOTING Q&A

Q: Why Doesn't the Electric Fan turn on when I flip the Manual Switch?

A: 1. Check all connections to make sure all wires are crimped correctly.

2. Check all Chassis Ground (-) connections to make sure all paint is sanded off and you are getting metal to metal contact.

Q: Why is the Electric Fan blowing in the wrong direction?

A: Switch the Positive (+) and Negative (-) Electric Fan leads. This will reverse the airflow direction.

Q: Is there a Thermostatic Switch that will automatically turn on the Electric Fan available?

A: Yes, please visit www.derales.com for several Thermostat options or visit your local retailer.

(Page 2)

Warning: Installation of accessories should only be undertaken by those with mechanical knowledge and are familiar with working on vehicles. Always use eye protection (goggles, safety glasses or shield). Park the vehicle in a well lit area, on level ground and apply the parking brake. Only work on a cold vehicle that has been sitting overnight, failure to do so will result in severe burns and injury. Before starting the vehicle, make sure no tools or any other items are left under hood that could interfere with or be drawn into moving parts of the engine. Failure to follow instructions can lead to severe damage and personal injury.
