

Why Install Just A Clutch... When You Can Install So Much More?

That's the question every jobber and installer should ask!

Everyone knows you must always replace or resurface the flywheel when installing a new clutch; right?

So when replacing a worn or under-performing clutch, why not upgrade to a genuine Fidanza Performance aluminum flywheel too and save time and money?

- Fidanza's replaceable flywheel friction surface eliminates resurfacing time and dollars for the life of the vehicle
- Fidanza Performance aluminum flywheels are often less than half the price of OE replacements
- Lightweight aluminum flywheels deliver faster acceleration, quicker throttle response, smoother shifting and free up additional horsepower to the wheels
- Aluminum flywheels dissipate heat better than OE or steel ones and promote increased clutch performance and longer clutch life
- Fidanza aluminum flywheels are designed to work with most OE and performance clutches

We Have Clutches Too - Fidanza V-Series clutches are designed for performance and drivability, with increased torque capacity and superior grip over OE clutches, but with only a slight increase in pedal pressure over stock. Available for many applications.

Install Fidanza and Experience the Difference!
