*Thank you for your purchase from our new line of Mopar parts.
Please call us at 877 - 4NO - ROLL if you have any questions
regarding the service or installation of your Hotchkis Performance products.*

**IMPORTANT: PLEASE READ THE ENTIRE INSTRUCTION MANUAL BEFORE
STARTING THIS INSTALLATION.**

Front Sway Bar Installation

- 1F Lift the vehicle and support. Wheels must be at ride height for end link, and bushing bracket mock-up, use of a flat alignment style rack, or drive-up ramps preferred.

2F *Weld-in Lower Control Arm Brackets*

Clean all grease, dirt, or debris from front face of the lower control arm in preparation for welding on end-link brackets. Brackets are to be mounted level, and approx. 1/8" inboard of the strut rods (Hotchkis). This gap may be 1/4" if still equipped with stock strut rods. Weld the accessible tabs to the arm.

3F *Install Hotchkis Sway Bar*

Insert the Hotchkis front sway bar through the middle of the k-frame like the stock bar use to. You may have to remove the passenger side wheel in order to gain more room to fish the bar through the k-frame.

4F. *Install New Subframe Bushing Mounts*

Install the Hotchkis subframe bushing mounts with the included hardware. Install the bolts downward with the 3/8"x2" in the front, 3/8"x1.75" in the middle and 3/8"x1.25" in the rear. Make sure to use a washer for the bolt head and the nut side.

5F *Install the Bushings & Brackets*

Lube the inside surface of the new bushings with the provided grease. Install the bushings on to the bar. Install the bushing bracket onto the bushing. Due to tolerances in subframes, you may need to install the large (1/2") & small (1/8") spacers between the bushing and the subframe bushing mounts. Please check the clearance the bar has inside the k-member. If it needs to move up or down, add or remove the 1/8" spacer to achieve proper clearance.

SUBFRAME BUSHING MOUNT

11F. *Install End Links*

Install the new end links in the same fashion as the stock removal.

Rear Sway Bar Installation

- 1R First, make sure you do not have a 7-1/4 rear end. The axle tubes will be too small for this kit. The kit will fit all other rear ends with Ø3" axle tubes. Lift the vehicle, and support. Wheels must be at ride height for dog bone frame bracket mock-up. Use of a flat alignment style rack, or drive up ramps preferred.

- 2R Loosely attach sway bar to diff. using the axle u-bolts, axle brackets, and sway bar bushings / brackets.

- 3R Loosely attach dog bones to middle hole on sway bar, and to frame brackets. Use hardware kit T1712.

- 4R Rotate sway bar, and frame brackets up until they contact the frame rails. (Fuel lines, and parking brake cables may need to be loosened, and moved for proper placement of frame brackets, and can be re-installed when finished.)

- 5R Shift the bar side to side, and fore & aft in order to evenly align frame brackets, and so that the dog bones are vertical when attached to middle hole in sway bar.

- 6R Clean and prep surface, and tack weld frame brackets to frame rails.
- 7R Verify that brackets are aligned correctly, if not, make necessary adjustments at this time. Remove dog bones from frame brackets, and completely weld in frame brackets. Let cool, and paint surface to prevent rust.

- 8R Grease all bushings with supplied urethane specific grease, re-install sway bar bushings, brackets, and dog bones. Evenly align sway bar so that dog bones are vertical, and completely tighten all hardware.
