K&N® Cabin Air Filters replace your vehicle's stock cabin filter with a reusable design that cleans and freshens incoming air. They are electrostatically charged to grab and hold dust particles. K&N® cabin air filters help control odors while they help capture most mold, mildew, fungus, spores, bacteria and germs. When they get dirty they can be cleaned and reused and best of all, they come with a 10 year/100,000 mile limited warranty.

When applicable, refer to owner's manual for manufactures installation/removal instructions. The following are helpful steps when replacing/servicing cabin air filter with K&N® cabin air filter.

1. Open glove box compartment.
2. Remove both stops on each side and unhook the cord from the inside of the glove box. (Fig. 1 & Fig. 2)
3. Let glove box drop down and remove bottom bolts and screws. (Fig. 3)
4. Remove top screws and bolt in the middle. (Fig. 3)
5. Pull glove box assembly straight out to remove from dashboard frame. (Fig. 4 & Fig. 5) **NOTE: You may carefully tilt the glove box assembly to rest on the floor without having to disconnect the wiring.**
6. Push down on the bottom panel under housing to gain access to cabin filter door. (Fig. 6)
7. Remove cabin filter door. (Fig. 7) **NOTE: The cabin filter door might be different depending on model.**
8. Remove dirty cabin filter. **NOTE: Remove any debris that might be present inside the cabin filter housing.**
9. Install K&N® cabin filter. (Fig. 8) **NOTE: Cabin Filter can only be installed one way with the tab facing out.**
10. Place door back on air box and reverse steps 1-6 to complete cabin filter installation. With the cabin filter installed, clean an area on the housing and apply K&N® Stop Decal. The decal will help notify others that this is a reusable cabin filter.
