

INSTALLATION INSTRUCTIONS

P/N 23000 - OIL PAN BAFFLE - SMALL BLOCK and 90° V-6 CHEVY

P/N 23010 - OIL PAN BAFFLE - BIG BLOCK CHEVY

This baffle is designed to hold down surging oil during acceleration and will be a snug fit in the oil pan. Minor trimming may be necessary with certain oil pans. Some Chevy H.P. crankshafts have large counter-weights which may scrape the anti-surge baffle. Reshaping or trimming the baffle will correct this.

The Moroso Part #23000 and #23010 Oil Pan Baffle should be installed against the rear main bearing cap in all cases. Check carefully for fit and clearance before final assembly.

When using with a main cap stud kit, it may be necessary to drill two 7/16" holes in the baffle for clearance.
