

# 99-06 Chevy / GMC K1500 4WD 6" Suspension Lift Installation Instructions

www.skyjacker.com

### REQUIRED TOOL LIST:

- \* Safety Glasses
- \* Metric / Standard Wrenches & Sockets
- \* Allen Wrenches
- \* Assorted Drill Bits
- \* Floor Jack
- \* Jack Stands
- \* Measuring Tape
- \* Torsion Bar Tool
- \* Torque Wrench
- \* Transmission Jack
- \* Reciprocating Saw
- \* Grinder

Before beginning the installation, thoroughly & completely read these instructions & the enclosed driver's WARNING NOTICE. Affix the WARNING decal in the passenger compartment in clear view of all occupants. Please refer to the Parts List to insure that all parts & hardware are received prior to the disassembly of the vehicle. If any parts are found to be missing, contact SKYJACKER® Customer Service at 318-388-0816 to obtain the needed items. If you have any questions or reservations about installing this lift kit, call SKYJACKER® Technical Assistance at 318-388-0816.

Make sure you park the vehicle on a level concrete or asphalt surface. Many times a vehicle is not level (side-to-side) from the factory & is usually not noticed until a lift kit has been installed, which makes the difference more visible. Using a measuring tape, measure the front & rear (both sides) from the ground up to the center of the fender opening above the axle. Record this information below for future reference.

Driver Side Front: \_\_\_\_\_

Passenger Side Front: \_\_\_\_\_

Driver Side Rear: \_\_\_\_\_

Passenger Side Rear: \_\_\_\_\_

### IMPORTANT NOTES:

- This lift is determined from the amount of lift to the front of the vehicle, while only lifting the rear to a position level with the front.
- If larger tires (10% more than the stock diameter) are installed, speedometer recalibration will be necessary. Contact your local GM dealer or an authorized dealer for details.
- After installation a qualified alignment facility is required to align the vehicle to factory specifications.

## Kit Box Breakdown:

### **C9661A-NSP:**

<u>ITEM#</u>	<u>DESCRIPTION</u>	<u>QTY</u>
C966L	GM 1/2T,6 LUG,LEFT KNUCKLE	1

### **HB-SKD                                      DIFF SKID PLATE**

<b>ITEM#</b>	<b>DESCRIPTION</b>	<b>QTY</b>
516X1FTB	5/16 X 1 FINE THRD BOLT	4
516FTN	5/16" FINE THRD N/I LOCKNUT	4
516SAEW	5/16 SAE WASHER	8

## **FRONT DISASSEMBLY:**

1. With vehicle on flat level ground set the emergency brake & block the rear tires. Place a floor jack under the lower control arm's front cross member & raise the vehicle. Place jack stands under the frame rails, behind the front wheel wells & lower the frame onto the stands.
2. Remove both the front OEM skid plates located in front of & under the front differential using a 15mm socket. (See Photo # 1)

**WARNING:** Be extremely careful when loading or unloading the torsion bars. There is a tremendous amount of stored energy (load pressure) in the bars. Keep your hands & body clear of the adjuster arm assembly & puller tool in case anything slips or breaks.

**NOTE:** A special PULLER TOOL is required for SAFE REMOVAL/ INSTALLATION of the torsion bars. This special puller can be purchased from a GM Dealer (Tool #J36202) or from Kent Moore Tool Group, Roseville, MI (800) 345-2233 or (313) 774-9500 (Part #J-22517-C).

3. Locate the torsion bar adjuster bolt on the bottom of the rear cross member, measure & record the length of the torsion bar adjusting bolt that is exposed below the nut & remove the torsion bar adjusting bolt. Apply a small amount of lubricating grease to the puller threads & the puller shaft-to-adjuster arm contact point. Position the puller & load the adjuster arm until the adjuster nut can be removed from the cross member. With the bar unloaded, slide it further forward into the lower control arm. If the bar seems lodged, use a hammer & punch through the hole in back of the cross member. When the bar shifts forward, the adjuster will fall free. (See Photo # 2) Repeat this process on the passenger side.
4. With the torsion bars removed from the rear cross member, remove the torsion bar cross member using a 21mm socket. With the cross member removed, remove the torsion bars from the vehicle.  
**Note:** Be sure to mark the driver & passenger for reinstallation.
5. Remove the front tires & remove the front shocks using a 21mm socket & 15mm wrench. Remove the front sway bar links using a 9/16 wrench.
6. Remove the tie rod end nut from the knuckle using a 18mm socket. Remove the tie rod end from the knuckle by striking the knuckle to dislodge the tie rod end. **Note:** Be careful not to damage the tie rod end. (See Photo # 4)

7. Disconnect the ABS line at the top of the frame rail. Remove the brakeline retaining bracket from the top of the steering knuckle using a 10mm wrench. **Note:** It will not be necessary to disconnect the actual banjo fitting at the caliper. Remove the caliper using a 18mm socket. Wire the caliper out of the way so that there is no stress on the brakeline. With the caliper removed, remove the rotor. (See Photo # 5)

Photo # 5

8. Remove the outer axle nut dust cover to allow access to the outer axle nut. Remove the outer axle nut & washer using a 1 7/16" socket. (See Photo # 6)

Photo # 6

9. Mark the cv-shaft prior to removal so that shaft can be reinstalled the same as removed. **Note:** Be sure to mark left & right. Remove the cv-shaft from the front differential using a 15mm socket. (See Photo # 7)

Photo # 7

10. Remove the upper & lower a-arm ball joints from the knuckle using a 18mm socket. **Note:** It may be necessary to strike the knuckle to allow the ball joints to dislodge. Remove the knuckle from the vehicle.

11. Remove the spindle bearing from the knuckle using a 15mm socket. (See Photo # 8)

12. Remove the lower a-arm from the frame using a 18mm socket & 15/16" wrench. (See Photo # 9)

13. Disconnect the front driveshaft using a 7/16" wrench. **Caution:** Be sure to mark the u-joint & yoke at the differential. The drive shaft **must** be installed the same way during reinstallation. Failure to realign the u-joint & yoke in the exact same point could result in vibration after install. (See Photo # 10) **Note:** Do not remove the driveshaft, simply strap it out of the way.

Photo # 8

**NOTE:** GM front drive shafts are balanced on each vehicle due to driveline vibrations. It is **very** important that drive shaft is reinstalled the same as factory.

Photo # 9

Photo # 10

14. Locate the factory rear two piece differential cross member. Locate the point on the driver side where the cross member is welded to the frame. It will be necessary to grind off the welds so that the cross member can be removed. (See Photo # 11)
15. With the welds ground off, remove the cross member mounting bolts using a 18mm wrench. Remove the rear cross member assembly. (See Photo # 12)
16. While supporting the front differential with a transmission jack, remove the passenger side differential mounting bolts using a 21mm socket & disconnect the actuator line from the passenger side of the front differential. (See Photo # 13)
17. Remove the driver side upper differential bolt using a 21mm socket. Disconnect the vacuum hose on the driver side of the front differential & remove the differential using a transmission jack. (See Photo # 14)
18. On the passenger side differential tube pad, locate the rearward mounting hole. Measure 1/2" from the outside edge of the hole to the outside edge of the mount & make a mark. Using a reciprocating saw, cut along the mark. (See Photo # 15 & # 16)
19. Locate the rear cross member mount on the passenger side frame. Grind off the bottom bolt sleeve flush with the frame. (See Arrow in Photo # 17).

**Photo # 11**

**Photo # 12**

**Photo # 13**

**Photo # 14**

**REAR mounting point on passenger side diff tube.**

**Photo # 15**

**Photo # 16**

**Photo # 17**

20. Locate the rear cross member mount on the driver side frame. Grind the front outside edge smooth. (See Photo # 18)

### **FRONT ASSEMBLY:**

21. Locate the upper mount of the differential & make a mark across the lower portion of the differential mount. Using a reciprocating saw, remove the factory upper differential mount. **Note:** Be extremely careful not to cut into the differential housing. (See Photo # 19) Use a grinder to clean up any imperfections or uneven cuts. (See Photo # 20) Some models will require the removal of the lower differential casting tab for rear cross member clearance. (See Photo # 21)

22. Insert the two poly bushings (SP3445) & sleeve into the eyelet of the new Skyjacker driver side differential bracket. Install the driver side differential bracket to the factory differential using the three 10mm x 60mm bolts & washers. (See Photo # 22) **Note:** Use the supplied thread lock compound when installing these differential bolts.

23. Install the new Skyjacker passenger side differential bracket. The bracket will install with the open end to the inside & the longest end on top. Use the OEM hardware to attach the upper part of bracket to the OEM mount. (See Photo #23)

24. Support the front differential & attach the differential to the passenger side bracket using the two 9/16" x 2" coarse thread bolts, washers, & nuts.

25. Attach the new Skyjacker polyurethane bump stops to the new Skyjacker bump stop brackets, using the 3/8" coarse thread nuts & washers. Install the new Skyjacker bump stop brackets by hooking to the factory upper frame bracket. (See Arrow in Photo # 24)

**Photo # 18**

**Photo # 19**

**Photo # 20**

**Photo # 21**

**Photo # 22**  
I-C966

**Photo # 23**

**Photo # 24**

26. Install new Skyjacker rear cross member using the 5/8" x 5 1/2" fine thread bolts, washers, & nuts at the upper mount. (See Photo # 25)

27. Attach the rear of the differential to the rear cross member using the OEM hardware. Push the differential back toward the rear of the vehicle & tighten the bolts. Reattach the front vacuum line & front actuator line.

28. Install the new Skyjacker front cross member using the 5/8" x 4 1/2" fine thread bolts, washers, & nuts at the upper mount.(See Photo # 26) ***If installing a Skyjacker Single Stabilizer Part # 7196 or Dual Steering Stabilizer Part # 7296, refer to those instructions at this time.***

29. Attach the driver front differential bracket to the new front cross member using the 14mm x 80mm bolt, washers, & nut. (See Photo # 27)

30. Install the lower a-arms to the new cross members using OEM hardware. **Note:** Do not tighten at this time.(See Photo # 28)

31. Install the new Skyjacker heavy-duty steering knuckles. Attach the upper & lower a-arm ball joints using the OEM hardware. (See Photo # 29)

32. Reinstall the hub bearing assembly to the new knuckle using the OEM hardware. Torque the flange bolts to 125 lbs. Reinstall the brake rotor & caliper. Torque the caliper bolts to 30 lbs.

33. **Install the driver & passenger side cv-shaft spacers, using the larger 3.35" wide spacer on the driver side & the smaller 1.175" wide spacer on the passenger side.** The spacer will install between the cv-shaft & differential. The spacer will install with the male end against the differential. Use the 10mm x 110mm bolts on the driver side & the 10mm x 60mm bolts on the passenger side. **Note:** Be sure to use thread lock compound on the bolts. (See Photo # 30) Torque bolts to 45 lbs. Reinstall the cv-shaft retaining nut & outer dust cover.

Driver side shown with 3.35" cv-shaft spacer.

Photo # 29  
I-C966

Photo # 30

34. Install the new Skyjacker front differential skid plate to the front & rear cross members using the four 5/16" x 1" bolts, washers, & nuts. (See Photo # 31)

Photo # 31

35. Attach the brake line retaining clip to the new knuckle using the 5mm x 12mm bolts. Slide the ABS clip up so that it will meet the mount. It may be necessary to spray the line with a lubricant to allow it to slide. (See Photo # 32) **Note:** This step must be performed in order to prevent damage to the ABS line & brakeline.

Photo # 32

36. Install the new Skyjacker sway bar end link bushing (Part # SBE-CBSH) on the stud of the pivoting end of the new Skyjacker sway bar end link with the larger diameter end facing the boot of the sway bar end link. Align the sway bar end link bushing with the OEM mounting location of the OEM a-arm & install the new Skyjacker sway bar end link. **Note:** Be sure to install the sway bar end link with the pivoting end at the a-arm. (See Photo # 33)

Photo # 33

37. Install the new Skyjacker front shocks & reinstall the front drive shaft. Be sure to reinstall the drive shaft the same as OEM. (See Photo # 34)

Photo # 34

38. Install the new Skyjacker torsion bar brackets onto the frame. Line up the rivets in the bottom of the frame with the holes in the bottom of the bracket. Using a c-clamp, hold the bracket so the outer & bottom holes can be marked & drilled. Once the holes are marked, drill the holes using a 1/2 drill bit. Once all holes are drilled, install the bracket using the 1/2" x 1 1/2" fine thread bolts, washers, & nuts. Tighten the bottom bolts first then the outer bolts. (See Photo # 35)

39. With the torsion brackets installed, install the poly bushings & sleeves into the drop bracket. Reinstall the OEM torsion bar cross member using the OEM hardware.

40. Reinstall the OEM torsion bars. **Note:** Be sure to install the adjuster bolts to the same length as OEM. (See Photo # 36)

41. Reinstall the front tires & let the weight of the vehicle on the ground. At this time, check all bolts & hardware for proper installation & torque.

Photo # 35

Photo # 36

42. Locate the transmission cross member. Using a 15mm wrench, remove the transmission skid plate. Using a transmission jack, support the rear of the transfer case. (See Photo # 37)
43. Using a 21mm socket, remove the cross member bolts from the frame. Reinstall the upper bolts with the template installed. Using the template below as a guide, mark the holes with a center punch & drill the new lower holes using a 9/16" drill bit. It is recommended to use a smaller bit first to allow for ease of drilling. (See Photo # 38 & # 39) The new holes will be 1" below the OEM holes. Once all holes are drilled, reinstall the cross member to the lower holes. (See Photo # 40) Reattach the transmission mount to the cross member mount. The OEM skid plate will not be reinstalled.

**Cross Member Relocation Template**

**Rear Installation:**

44. Remove the OEM rear shock using a 21mm socket.
45. Raise the rear of the vehicle & support the frame rails using jack stands.
46. While supporting the rear axle with floor jack, remove the rear u-bolts using a 22mm socket. If installing add-a-leaves & blocks, skip to Step # 48.

**REAR SPRING INSTALLATION:**

47. While supporting the gas tank with a transmission jack, remove the retaining straps from the gas tank. This will allow access to the front spring eye bolt. (See Photo # 41)
48. Install the new Skyjacker Softride springs using the OEM spring eye bolts. Install with the thickest part of the shim towards the rear. Do not tighten the spring eye bolts at this time. Skip to Step # 50.

**Photo # 37**

**Photo # 38**

**Photo # 39**

**Photo # 40**

**Photo # 41**

## **ADD-A-LEAF AND BLOCK INSTALLATION:**

49. To perform the installation of add-a-leaves properly you must use two large c-clamps to contain the elastic potential energy in a leaf spring when the center tie bolt is being removed. Attach & tighten a c-clamp on the leaf spring on both sides of the center tie bolt to hold the spring assembly securely together. Using locking pliers to hold the head of the center bolt, loosen & remove. With care, slowly loosen & remove the c-clamps & spring's bottom overload leaf, if equipped.
50. Insert the new tie bolt through the original bottom overload leaf, new add-a-leaf, & through the original spring pack. Only finger tighten the nut at this time.
51. **DO NOT USE THE CENTER TIE BOLT TO DRAW THE SPRING LEAVES TOGETHER. FAILURE OF ANY COMPONENT CAN CAUSE AN EXPLOSIVE DISASSEMBLY & POSSIBLE INJURY!** Place one c-clamp on each side of the center bolt & tighten evenly. Once the c-clamp has drawn the leaves securely together, hold the center tie bolt head with locking pliers & tighten the nut. Remove the c-clamps & cut off the excess length of the tie bolt. Install the new Skyjacker 5.5" lift blocks with the thickest part of the block towards the rear of the vehicle.
52. Raise the axle back up to the leaf spring, be sure that the dial pin lines up with the axle. Install the new Skyjacker u-bolts & torque to 85-90 ft lbs. Let the weight of the vehicle on to the ground & tighten the spring eye bolts.
53. Install the new Skyjacker rear shocks. (See Photo # 42) **Note:** On the OEM shock brackets at the differential, there is a brake line bracket. The bolt that holds this bracket to the shock bracket must be ground down for clearance of the shock.

## **FINAL NOTES:**

- After the installation is complete, double check that all nuts & bolts are tight. Refer to the following chart below for the proper torque specifications. (Do not retighten the nuts & bolts where thread lock compound was used.)
- With the vehicle placed on the ground, cycle the steering lock to lock & inspect the steering, suspension, brake lines, front & rear drivelines, fuel lines, & wiring harnesses for proper operation, tightness, & adequate clearance.
- Have the headlights readjusted to the proper settings.
- Have a qualified alignment center realign the front end to the factory specifications.
- Retorque all the bolts after the first 100 miles.

<b><u>TORQUE SPECIFICATIONS</u></b>					
<b><u>INCH SYSTEM</u></b>			<b><u>METRIC SYSTEM</u></b>		
<b>Bolt Size</b>	<b>Grade 5</b>	<b>Grade 8</b>	<b>Bolt Size</b>	<b>Class 8.8</b>	<b>Class 10.9</b>
