

PART #2025 & 2125 (With Tube) INSTALLATION INSTRUCTIONS

Trans-Dapt's #2025 carburetor adapter will allow you to install a #94, #97, #48, small base 2GC, wide base 2GC, or Tri-power carburetor virtually any single throat carburetor manifold.

1. Using the gaskets, studs, cap screws, nuts and flat washers included with this kit, install the adapter on the carburetor you are going to install. Butterfly and throttle arm positions vary from manufacturer to manufacturer. For this reason, it may be necessary to file down the adapter to accommodate your carburetors butterfly, throttle arm or other carburetor manufacturer's specific components.
2. Once the adapter is installed on the carburetor, inspect the carburetor to ensure that it operates properly, without binding. Once you have determined that your carburetor functions with the adapter installed, mount the carburetor and the spacer as a single unit on to the manifold.

SPECIAL NOTE: When using a carburetor with four mounting bolt holes, you must check that the notch in the mounting gasket is over the plugged stud hole in the adapter. When using a carburetor with three mounting bolt holes, remove the plug screw from the adapter and install the supplied carburetor mounting stud.
