

Installation Instructions for 80880 Tight Radius Tubing Bender

JEGS Tight Radius Tubing Bender is designed to bend 1/8" and 3/16" tubing such as brake and nitrous line. Includes a storage position for axle and wheel not in use.

To bend tubing, insert into desired axle and bending wheel. Firmly hold tubing against axle while bending around wheel to desired position. Be sure that tube does not slide or move. Also, be sure to use appropriate wheel for the size tubing you are bending.

Axle position 1 allows for standard bends along the tube.

Axle position 2 allows for tight bends close to the tube nut.
