

## **Installation Instructions for 90000 & 90001 '39 Ford Style Taillights**

This item is an **exact** reproduction of the original 39 Ford Tail Light.

### **Wiring Diagram**

- White wire = Stop / Turn
- Black wire = Taillight
- The assembly is a self grounding unit assuming that it is mounted on sheet metal. If it is being mounted on plastic or fiberglass you would simply run a wire from the mounting stud/bolt to the frame.

It includes an 1157 bulb. The bulb is a double filament running / turn / brake light.

If / when the bulb ever needs to be replaced; the lens cover plate needs to be **very gently** pried from the case as the bulb is accessed from the front of the assembly and from behind the lens.
