K&N® Cabin Air Filters replace your vehicle's stock cabin filter with a reusable design that cleans and freshens incoming air. They are electrostatically charged to grab and hold dust particles. K&N® cabin air filters help control odors while they help capture most mold, mildew, fungus, spores, bacteria and germs. When they get dirty they can be cleaned and reused and best of all, they come with a 10 year/100,000 mile limited warranty.

When applicable, refer to owner's manual for manufactures installation/removal instructions. The following are helpful steps when replacing/servicing cabin air filter with K&N® cabin air filter.

1. Locate cabin air filter access panel under the hood on passenger side of the firewall. Fig. 1
2. Unfasten access panel to reveal cabin air filter.
3. Remove cabin air filter. **NOTE: Remove any dirt and debris that might be present in cabin filter tray and housing.**
4. Install K&N® cabin air filter into housing. Slide filter into frame approx 1/3 the way in. Fig 4

**NOTE: K&N® cabin air filter has cut outs that will allow the filter to bend into the correct shape for proper fitment. Fig 2 & 3**

5. Bend filter to wrap underneath into smaller portion of frame. Fig. 5, 6 & 7
6. Reinstall cabin filter access panel. With the cabin filter installed, clean an area on the housing and apply the K&N® Stop Decal. The decal will help notify others that this is a reusable cabin filter.

Images of cabin filter frame were taken with the frame removed from vehicle to illustrate proper installation.  
**YOU WILL NOT BE ABLE TO REMOVE FRAME FOR INSTALLATION ON YOUR VEHICLE**
