Before You Start:

Please read the entire manual before starting.

1. Raise Vehicle

Raise the front of the vehicle and support it on jack stands. You may also use a 2-post or 4-post lift.

2. Remove the wheels

Remove both front wheels

3. Loosen the Upper Ball-joint Castle Nut

Pull the cotter pin out using a pair of dikes or pliers. Loosen but do not remove the castle nut securing the upper ball-joint to the spindle.

Smack the spindle mount with a hammer to break loose the ball-joint stud from the spindle. The spindle should drop down and rest on the castle nut. Do not remove the castle nut yet!

4. Jack up the Suspension

Place a jack underneath the lower control arm and raise the suspension until just before the car begins to raise.

5. Remove the Upper Ball-joint Castle Nut

Push downward on the upper ball-joint and spin the castle nut off. The A-Arm is now loose from the spindle. It might be a good idea to use a bungee cord or wire to keep the spindle and hub assembly from dangling & pulling on the brake lines.

6. Undo the Inboard Mounts

There are 2 splined studs that holds the cross-shaft to the frame. First, remove the 2 stud nuts. The cross-shaft should be loose from the frame, however the splined studs may prevent you from removing the A-Arm due to engine clearance. Remove the splined studs by popping them outboard. You may need to use a small hammer or c-clamp to convince the stud to come out. Once the studs are out, you can remove the A-Arm completely.

7. Reinstall the Hotchkis A-Arm

Reinstall the Hotchkis A-Arm in the same manner as removal. Use the following pictures as a guideline.

Pictures above show how to determine which side is which. The droop stop hole and the bushing tube can be your reference point.

Cross Shaft Orientation:

There are two possible orientations for the cross shaft. The top picture shows the position for normal street driving conditions, where below -1.5° of camber is desired. The lower picture shows the cross shaft flipped to gain an additional -1.5° of camber for performance alignments. Each car may vary.

8. Grease the Ball Joints

Grease all of the ball joints using a grease gun. Use any high quality chassis grease.

9. Align Your Car

You must get your car aligned by a professional after you install your Hotchkis A-Arms.
