

Installation Instructions BACK-UP LIGHT SWITCH

Fits: Hurst Front Quarter Stick® and Pistol Grip Shifters

HURST # 2488601

WORK SAFELY! For maximum safety, perform this installation on a clean, level surface and with the engine turned off. Place blocks or wedges in front of and behind both rear wheels to prevent movement in either direction.

CAUTION: To avoid any possibility of bodily injury or damage to vehicle, do not attempt installation until you are confident that the vehicle is safely secured and will not move.

IMPORTANT: Back-up light switch must be used in conjunction with Neutral/Park Start Safety Switch #2488600.

BACK-UP LIGHT SWITCH INSTRUCTIONS - FRONT CABLE QUARTER STICK #2488601

1. Vehicle must have engine off, parking brake securely engaged, and wheels blocked. Put shifter into reverse gear position. (Rear cable shifters are not equipped for back up lights.)

2. Slide the switch into the top opening of the housing so the wire terminals are up and facing the stick. Use the #440 fasteners to secure the back-up light switch to the housing. Use washers under each screw head and nut.

3. Using the female crimp connectors and two suitable lengths of 16 gauge automotive grade insulated wire, crimp a connector to one end of each wire then push onto each of the back-up light switch terminals. (See Illustration below.)

4. Adjustment of switch is accomplished by loosening the #440 fasteners and moving the switch backwards and forward until the reverse lights are activated. Once the switch is properly positioned, re-tighten the #440 fasteners. Back-up lights should light only when the shifter is in reverse position. Route all the wiring away from sharp corners or edges and hot (above 200°F) vehicle components. Secure the wire routing using either nylon wire ties or black electrical tape. (See Wiring Illustration below.)
