

Installation Instructions for 40681 & 40682 Ignition Box Mounting Plates

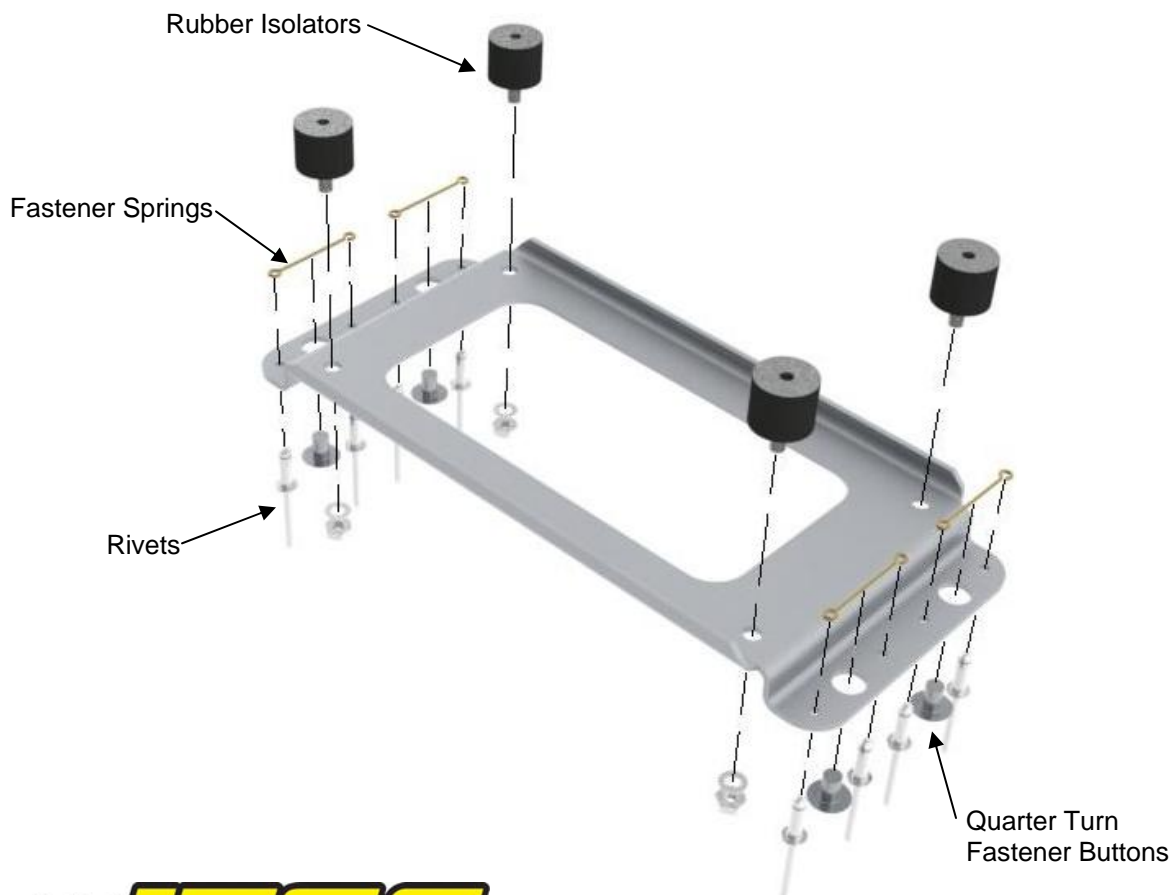

Installation Instructions:

OPTION #1: This mounting is intended to be mounted so that the quarter turn fastener buttons install from the back side of the bracket.

1. Using the mounting bracket as a template mark the location for the quarter turn fastener buttons in your desired location on your chassis body panel.
2. Using the supplied rivets, rivet the supplied fastener springs to the front of the mounting bracket as shown.
3. Mount the rubber isolators (not included) for the ignition box as shown. Replacements are available at JEGS #555-40686. **See page 2 for additional ignition box hole locations.**
4. Mount the mounting bracket in the desired location by installing the supplied quarter turn fastener buttons through the body panel and into the back of the mounting bracket.

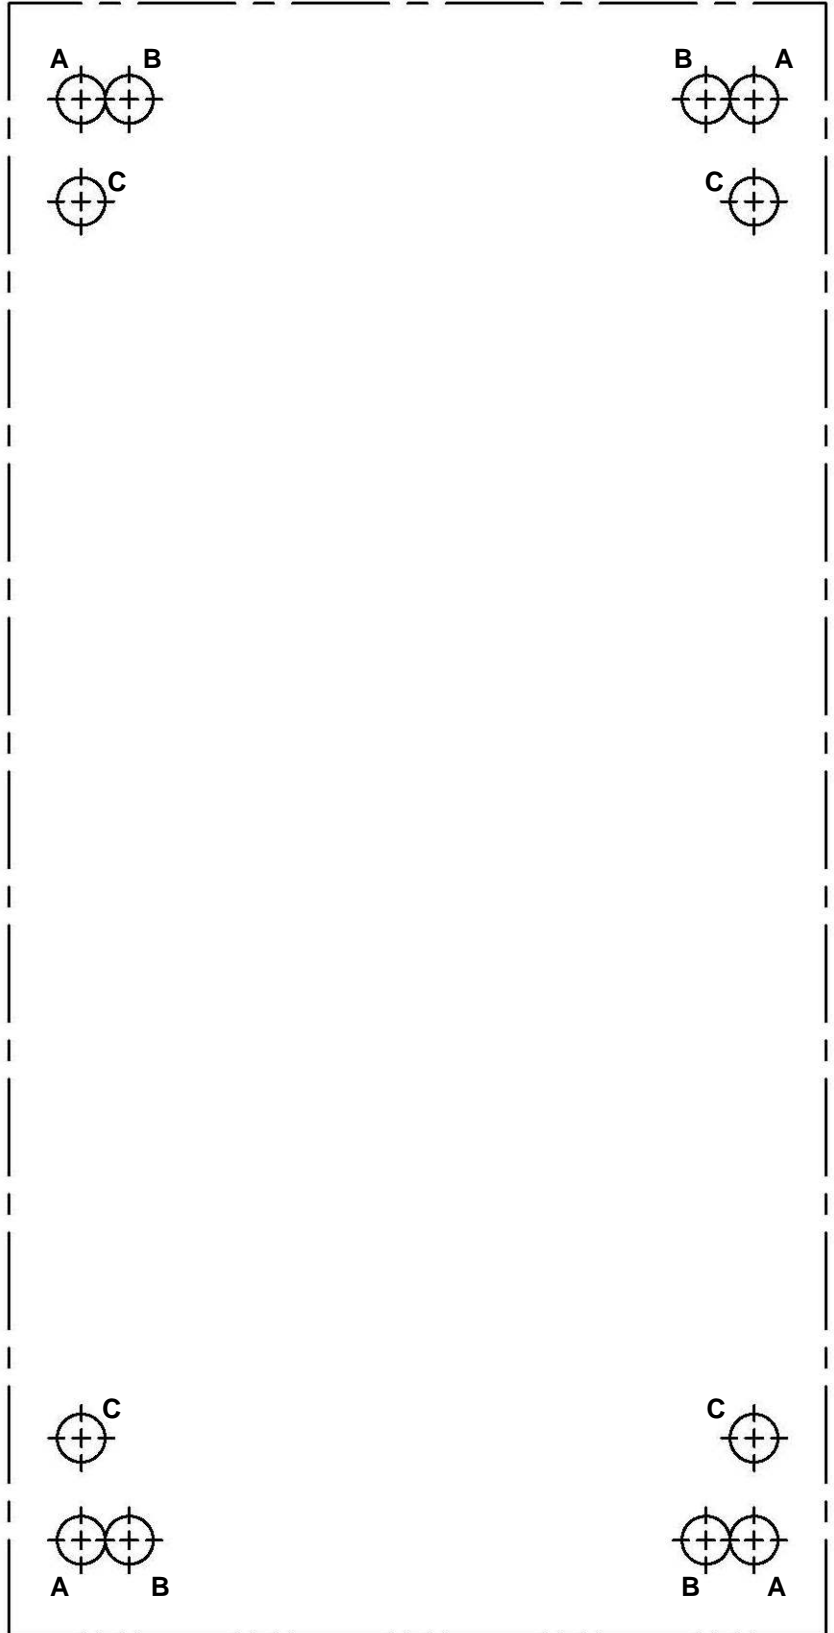

OPTION #2: This mounting is intended to be mounted so that the quarter turn fastener buttons install through the front side of the bracket.

1. Using the mounting bracket as a template mark the location for the quarter turn fastener buttons and the mounting holes for the fastener springs in your desired location on your chassis body panel.
2. Using the supplied rivets, rivet the supplied fastener springs to the back side of your chassis body panel.
3. Mount the rubber isolators (not included) for the ignition box. Replacements are available at JEGS #555-40686. **See page 2 and additional ignition box hole locations.**
4. Mount the mounting bracket in the desired location by installing the supplied quarter turn fastener buttons through the front of the mounting bracket and then through the body panel.

Additional Mounting Hole Locations for 40681

1. Print this page in 'Actual Size' or 100%.
2. Cut-out template on dashed line.
3. Line-up the holes marked 'A' with the pre-drilled holes in your mounting plate. Using masking tape secure the template to the mounting plate.
4. Using the chart below select the mounting holes that corresponds to your ignition box.
5. Using a small punch transfer the hole center locations from the template to the mounting plate.
6. Remove the template and drill your new mounting holes using a 1/4" drill bit.
