

## **Installation Instructions for 50510, 50511, 50512 & 50513 Solid Motor Mount**

The JEGS solid front engine mounts provide a firm foundation for racing or the serious street enthusiasts. They keep the engine in its place, eliminating the movement caused by flexible, stock rubber mounts. Solid mounts limit engine movement and make linkages operate smoother. (Transmission manufacturers recommend using urethane transmission mounts when using solid engine mounts.)
