

SPECIAL NOTE:

MOST 64-67 GM A-bodies require a rear spring that has a "pigtail" on the bottom and is "open" on the top.

ALL 68-72 GM A-bodies require a rear spring that is "pigtail" on the top AND bottom.

SOME 67 GM A-bodies require a rear spring that is "pigtail" on the top AND bottom.

This is very easily determined by looking at the stock springs. If the car had pigtail/pigtail springs and a pigtail/open spring is installed, the car will sit about 2" too high.

Pigtail

Open
