

4-Barrel Universal Throttle Body

INSTALLATION INSTRUCTIONS

The BBK Universal 4-bbl Throttle Body is designed to work in conjunction with any 4 bbl Holley-type manifold and will mount on such manifold in the same manner as a carburetor.

Supplied with the kit are the gasket, late GM- type TPS and typical vacuum ports/plugs. The throttle body is machined to accept a late-GM idle air control motor (98-02 Camaro/GM truck V-8). A 1/4" dia. Throttle ball stud is supplied with 2 mounting locations to offer some adjustability of the ratio and/or allow other connections to the primary linkage. The top will allow standard 4-bbl air cleaner housings and is tapped 1/4-20 for universal air cleaner hold downs.
