

MX30016BK
Chain Lube Applicator

Instructions

1 Slip the Applicator between the chain and roller placing the chain within the center channel in the Applicator.

2 Slide the Applicator all the way forward until it stops at the frame.

3 Spin the tire clockwise while applying lube through the "window" in the Applicator.

The applicator forms a "window" to lubricate your chain while protecting your suspension and linkage from the mess of unnecessary lubricant.

If the Applicator will not work below the swingarm it can be used above just as easily. You will want to spin the tire counter-clockwise if using it on top of the swingarm.

When finished lubricating remove the Applicator and wipe clean.

It is helpful when you start lubricating with your master link in the "window" the Applicator creates so you can more easily determine how much lubricant has been applied by counting revolutions of the master link.

Scan this for a video demonstrating how easy it is to use!
