22104R *Adjustable Rear Sway Bar Kit*

Rear Bar Installation

1. Take note of the current stock sway bar installation.
2. Drive onto a 4-post lift or alignment rack. You may also drive the rear of the vehicle onto floor ramps if a lift isn't available. Installation of this kit is easier if the weight of the car is on it's wheels
3. Remove the stock sway bar endlinks.
4. Remove the four bolts holding the sway bar to the axle U-Bolts.
5. Remove the factory sway bar and U-bolts from the vehicle.

6. Using the included white silicone grease, lube the inside of the urethane 15/16" sway bar bushings. (The silicone grease can be cleaned up with WD40.)

7. Install the urethane bushings on the bar. Place the bushing's bracket over top the bushing.

8. Attach the swaybar to the axle using the new Hotchkis U-bolts and brackets. Note: The new brackets may have only one side of the bracket engaged on the axle tab. Do not fully tighten the axle U-bolts at this point.

9. Insert the new end links through the frame bracket and install the bushing/washer/nut on the top finger-tight. The end link length is adjustable. Adjust the length of the end link by spinning the ball joint in or out on the threaded rod. Adjust the length until the rod shows approximately 12 threads from the jam nut to the stop. This is a good initial length to start off with. Fully tighten the jam nut.

The bar has 3 stiffness holes on each side. The hole closest to the end is the softest setting. Choose a setting based on your handling needs. Insert the ball joint stud into the sway bar end hole. Secure the ball joint end using the supplied washer and nylock nut. Fully tighten this nut.

Next, fully tighten the nut on top of the end link completely

10. The bushing brackets attached to the axle tubes have slots and the fore/aft position can be adjusted slightly. Adjust the position so that the end link is as upright as possible. For example, if you have the end links attached to the softest setting (closest to the end), you'll want to shift the bushing brackets towards the rear of the vehicle as much as possible. Once you are in position, tighten the U-bolts completely.

11. Double check that all fasteners are tightened.

Your installation is finished. Enjoy your new sway bars!
