- 6) Then remove the front trailing arm bolt using a socket with an extension-place the socket through the outer hole in the frame to loosen the nut (Does not apply to F body). **Caution** – be careful not to drop the bolt into the frame – if you do then remove the bolt through the large hole on the underside of the frame.
- 7) Remove the unbolted trailing arm.
- 8) Clean the frame at the trailing arm pivot area with a wire brush.

Installation of HP Lower Trailing Arms

Hotchkis performance trailing arms are fully assembled, greased and ready to install.

- 1) Apply a thin layer of chassis grease to faces of bushings before installation.
- 2) Install HP trailing arms with the grease fittings facing down and the sway bar mounting holes toward the **rear** of the car.
- 3) Install the new trailing arm by locating the front bolt first.
- 4) Place one drop of blue **Loctite** on clean threads and torque the nut to 70 ft./lbs.
- 5) The trailing arm should then pivot smoothly on the chassis.
- 6) Install the rear bolt.
- 7) Place one drop of blue **Loctite** on clean threads and torque nut to 70 ft./lbs.
- 8) Install the rear sway bar using the stock or supplied bolts. (7/16" on early models- 10mm late models 78 on) (1305 trailing arms have supplied hardware) **Does not apply to F body.**

- 9) Place one drop of blue **Loctite** on clean threads and torque sway bar nuts to 35 ft./lbs.
Note: **Loctite** not needed if using new Hotchkis Performance hardware.

1501 DOUBLE ADJUSTABLE PANHARD BAR 82-02 CHEVROLET/PONTIAC F-BODY

Thank you for your purchase.

Please call us at (562) 907-7757 if you have any questions regarding your Hotchkis Performance products. Visit us online @ www.hotchkis.net

INSTALLATION OF HOTCHKIS PERFORMANCE ADJUSTABLE PANHARD BAR

- 1) Jack up the rear of the vehicle and use jack stands to support the sub-frame.
- 2) Place the jack under the differential to raise or lower the axle as necessary. You will need to do this so that the axle sits at ride height in the vehicle. **USE CAUTION!** Do not take the vehicle weight off the jack stands.
- 3) Remove the bolts at each end of the stock panhard bar and remove the bar. Retain and clean the stock hardware for later use!

- 4) Place the stock panhard bar on a flat, level surface, next to the Hotchkis panhard bar. Match the length between the bushing centers on the stock bar to the Hotchkis bar. If the lengths are uneven, then loosen the jam nut on the Hotchkis bar and rotate the head of the bar to adjust. Make sure you keep the exposed threads the same on both sides of the panhard bar.

With all adjustments to the bar complete loosely tighten the jam nuts by hand to keep the heads from spinning when installing the bar.

- 5) Use the grease provided in the kit to apply a thick coat of grease to the sides of the panhard rod bushings to prevent squeaking after installing.

- 6) Install the Hotchkis panhard rod back into the mounting points the stock bar used. Make certain that the grease fittings on the bar point towards the ground (if the head isn't facing the opposite direction of the non-adjustable end), as this will make it easier to grease the bar after installation. Install the fixed end of the bar first. Re-use the stock hardware to attach the bar, and loosely tighten it by hand.

- 7) Once the bar is in the correct position, secure the brake line to the panhard rod with a zip-tie or similar device. Apply one drop of Loctite to the threads that hold the panhard rod to the car and axle (the threads should be clean), and tighten all of the attaching hardware. Torque the attaching hardware to 50ft./lbs.

Once you have centered your axle using a tape measure, use a wrench to tighten the jam nuts against the panhard rod to keep it from rotating. Cover the zerk fittings using the caps provided. Remove the jack stands and lower the vehicle to finish the install.

IMPORTANT: Torque the jam nut before use. Re-torque the jam nut after the first use! Check all hardware after driving five miles.

To avoid bushing squeak, use the zerk fittings and grease gun to lube the bushings. The bushings will typically need to be lubed only once a year, but you can also consider lubing them with every oil change for good measure. **Use only NON-LITHIUM based grease** for lubrication as lithium base grease can wash out with water.

2203 Sport Sway Bar Set *82 – 92 Camaro/Firebird*

Front Bar Installation

1. Look carefully at the current installation.
2. This installation can be performed without removing the front wheels. Always use proper safety devices such as jack stands or lift jacks to properly support the vehicle.
3. Loosen front bushing retaining bolts, leave a few threads engaged to support the bar.
4. Remove the factory end link from the car.
5. Support or hold the center of bar and carefully remove front bushing bolts.
6. Remove factory bar from vehicle, taking note of the placement of the sway bar bushings.
7. Using the included white silicone grease, grease the inside of the urethane 1 7/16" in sway bar bushings. (The silicone grease can be cleaned up with WD40.)

8. Install the urethane bushings on the bar. Make sure you position the bushing so when the bar is installed in the vehicle, the split will face the front of the car.
9. Place the bushing's bracket over top the bushing.
10. On some cars, you may need to use the provided spacer shim to prevent the bar from contacting the subframe. Simply place the shim between the bushing/bracket and the subframe if needed.

Spacer Shim

11. Install the new sway bar into the car using the original bolts on the new bushings. Just start a few threads to support the bar, don't finish tightening these yet.
12. Install the new end links (**part# 98128G**) using a ratchet and wrench.
13. Tighten end link nut to the point where the end link bushing's diameter is just larger than it's support washer.
14. Push the bar as far forward as possible and finish tightening the front bushing bolts

Rear Bar Installation

1. Look at the current sway bar installation.
2. Support the vehicle by the frame with lift jacks or jack stands, allowing the suspension to be unsupported.
3. Remove the sway bar endlinks.
4. Remove the four bolts holding the sway bar to the axle U-Bolts.
5. Remove the factory sway bar and U-bolts from the vehicle.
6. Using the included white silicone grease, grease the inside of the urethane 1" in sway bar bushings. (The silicone grease can be cleaned up with WD40.)
7. Install the urethane bushings on the bar. Make sure you position the bushing so when the bar is installed in the vehicle, the split will face the front of the car.
8. Place the bushing's bracket over top the bushing.
9. Attach the swaybar to the axle using the new Hotchkis U-bolts and brackets. Note: The new brackets may have only one side of the bracket engaged on the axle tab. Do not fully tighten the axle U-bolts at this point.
10. Insert the new endlinks (part # 98125G) through the bar and the frame bracket. Tighten till the bushings are squeezed to a larger diameter than their support washer.
11. Tighten the U-bolts.
12. Double check that all fasteners are tightened.

Your installation is finished. Enjoy your new sway bars!

#4001 SUBFRAME CONNECTORS 1982-1992 CAMARO/FIREBIRD

Please read instructions completely before starting installation. Hotchkis Performance subframe connectors are weld-in units and may require modification of the exhaust system. This installation should be performed by a welding professional only! They can not be installed on convertibles.

- 1) Support car securely on jack stands or hoist. Leave area under doors clear for placement of subframe connectors. Begin on the passenger side.
- 2) Measure from pinch weld under passenger door to closest point of exhaust "Y" pipe. **Minimum clearance must be 2 ½ inches! (see fig. 1).** If necessary, remove exhaust "Y" pipe and shorten to allow adequate clearance between pipe and passenger side pinch weld. Check for clearance, but do not install "Y" pipe at this time.

Figure 1

- 3) Attach the rear of the connector to the trailing arm mount using existing hardware, and then lift until the front contacts the floor of the car. Use a marker to show where the front of the connector contacts the floor. With connector held in place, mark the trailing arm mount around the outside of the connector flange and as far as possible along the bottom of the flange (see fig. 2).

Figure 2

- 4) Remove the connector and grind the areas marked on the car for welding. **Be sure to grind through all protective plating.** Grind powder coating off of the subframe connectors in areas to be welded.
- 5) Put the subframe connector in place and tighten the trailing arm bolt to a snug fit. Tack weld the connector in several places at each end. Remove the rear control arm and completely weld in the subframe connectors. When the area has cooled, paint welds and any bare metal.
- 6) Install control arm and torque to 70 ft./lbs.
- 7) Install "Y" pipe, relocating air tube clamp forward (see fig. 1).
- 8) Proceed to driver's side. Repeat steps 3 through 6. If necessary bend plate at front of subframe connector to allow total contact with floor.

This limited warranty gives the purchaser specific legal rights and the purchaser may have other rights that may vary from state to state.
