JEGSTER PINTO LOWER CONTROL ARM STRUT #40221

This control arm strut is to be used with a stock Pinto lower control arm or the lower arm from Jegster kit #40222. This control arm strut will fit Jegster Pinto front ends #910061, #910071, and #910081. Install the Pinto lower control arms on the front frame with the cam bolts and washers in place as illustrated in the front end instructions. The rubber bushings should be new or like new. The cam bolts should be centered in the slots. Install the struts as shown and weld the tabs to the front surface of the control arms. It may be necessary to trim the flange on the stock control arms to allow room for tabs.
