JEGSTER BRAKE PEDAL 550 40306 --
PUSH ROD 550 40311 --
BRACKET 550 40312 --

The illustration below shows a typical brake pedal, push rod, and bracket installation. The pedal mount tabs and the master cylinder bracket and the gussels may need trimmed to fit your chassis crossmembers. Also the bracket is undrilled to allow a custom fit to your cylinder. Tack weld the pedal tabs and the bracket and gussels and check clearances through the full pedal travel. Check for smooth operation through full pedal travel. Check master cylinder alignment with the push rod. Make sure there is no binding. Finish the welds.
