

JEGSTER ADJUSTABLE PANHARD BAR 41056

This adjustable bar is a direct bolt in replacement for the stock one. Please clean any foreign matter from boxing and shipping from the internal and external threads of the adjuster with an air nozzle. Also please lubricate the threads before assembly. Use the stock mounting bolts. Use the included flat washer on either side of the adjuster end of the bar. Adjust the bar length so that the rear end housing is centered in the body. Check for minimum thread engagement of 5/8 ". Tighten bolts and the jam nut.

If the car has been lowered, a Jegster bracket 41055 along with this adjustable bar will correct the bar geometry and lateral alignment. See the instructions with that bracket.
