Thank you for purchasing this instrument from Intellitronix. We value our customers!

INSTALLATION GUIDE

LED Digital Oil Temperature Gauge

Part Number: M9108

*** Always disconnect the battery *before* attempting any electrical work on your vehicle.***

KIT COMPONENTS

- ◇ **Digital Oil Temperature Gauge**
- ◇ **Pressure Sending Unit (S8013)**
- ◇ **Mounting equipment**

WIRING INSTRUCTIONS

Note: Automotive circuit connectors are the preferred method of connecting wires. However, you may solder if you prefer.

Ground - Black Connect directly to an engine ground such as the engine block. For the most accurate readings, connect to the same ground as the sending unit.

Power - Red Connect to a switched +12V source such as the ignition switch.

Dimmer - Purple Connect to the parking lights to dim the LEDs 50% when the headlights are on. However, **do not** connect to the headlight rheostat control wire; the dimming feature will not work properly.

Temperature - Blue Connect to the output of the temperature sending unit. **Do not** use Teflon tape or other sealer on the new sending unit's threads to avoid inaccurate readings.
