

63426 REMOTE THERMOSTAT HOUSING

Moroso's 63426 Remote Thermostat Housing is engineered to fill a variety of needs for the street, racing and, marine enthusiast. Use the illustration above, along with the parts list, to assemble a system of your own. Hot water returning from the engine is routed to the underside of the housing via two #12 lines. From there it can pass through a water restrictor or a GM thermostat. A factory GM thermostat housing can be bolted to the top or you could use one of the parts listed in the above illustration. Water is then returned to the radiator. Three 3/8-16 bolt holes on the back of the housing secure the assembly to a motor plate, a radiator support or, a fabricated bracket for a custom installation.
